MITSUBISHI ELECTRIC

Electronic Multi-Measuring Instrument
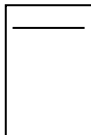

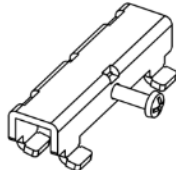

MODEL

ME96SSHA-MB

User's Manual: Detailed Edition

●Before operating the instrument, you should first read thoroughly this operation manual for safe operation and optimized performance of the product.

Deliver this user's manual to the end user.

Check on your delivery

Check the following point as soon as you receive Mitsubishi Electronic Multi-Measuring Instrument

Parts name	Quantity	Specifications
User's Manual (Simplified)	1	A3 size
Attachment lug (with screw)	2	

About the optional plug-in module sold separately

This product has the following optional plug-in module.
It is possible to correspond to various I/O by installing the optional plug-in module.
We hope that you will order to us.

Type name of optional plug-in module	I/O specifications					
	Analog output	Pulse/Alarm output	Digital input	Digital output	Communication	Logging function
ME-4210-SS96	4 circuits	2 points	1 point	—	—	—
ME-0040C-SS96	—	—	4 points	—	CC-Link	—
ME-0052-SS96	—	—	5 points	2 points	—	—
ME-0000MT-SS96	—	—	—	—	MODBUS® TCP	—
ME-0000BU-SS96	—	—	—	—	—	6 items

Note	"ME-4201-NS96", "ME-0052-NS96" and "ME-0040C-NS96" can not use in the ME96SSHA-MB. They can use for ME96NSR, ME96NSR-MB only.

I/O Parts	Specifications	Type name of optional plug-in module
Analog output	Output :4 to 20mA Load resistance :600Ω or less	ME-4210-SS96
Pulse/Alarm output	No-voltage 'a' contact Contact Capacity :DC35V, 0.1A or less	ME-4210-SS96
Digital input	Contact Capacity :DC24V(DC19 to 30V),7mA or less Input Pulse Width :30ms or more	ME-4210-SS96 ME-0040C-SS96 ME-0052-SS96
Digital output	No-voltage 'a' contact Contact Capacity :DC35V, 0.2A or less	ME-0052-SS96

In this manual, when the optional plug-in module is installed, it explains.

This instrument measures the load status by inputting the secondary side of the VT and CT, and displays various measurement values.

● This instrument supports highly accurate measurements (accuracy of current and voltage: 0.1%; active energy: class 0.5S) and high-order harmonic measurement (1st to 31st).

● This instrument enables measurement of integrated active energy divided into two time segments such as peak/off-peak and day/night. (Periodic Active Energy)

● This instrument enables measurement of the active energy in a block of any period (interval).(Rolling Demand)

● The password protection setting avoids undesired change of settings or deletion of measured data.

● The instruments with transmission functions (MODBUS®RTU communication, CC-Link communication, MODBUS® TCP communication) are able to transmit the measured data to superior monitoring devices.
(CC-Link communication: When the ME-0040C-SS96 optional plug-in module is installed)
(MODBUS® TCP communication: When the ME-0000MT-SS96 optional plug-in module is installed)

● Using the logging function, measurement data can be backup even when the MODBUS®RTU communication fails.
(Logging function: When the ME-0000BU-SS96 optional plug-in module is installed)

● The instruments with analog/pulse output function are able to output key measurement factors (current, voltage, active power, power-factor, and Active Energy) of the power receiving point alone and are optimum for remote monitoring.(When the ME-4210-SS96 optional plug-in module is installed)

● This instrument complies with the requirements of the CE marking, UL standards, KC mark, and FCC/IC.

MODBUS® is a registered trademark of SCHNEIDER ELECTRIC USA, INC in the United States.

Instructions for Handling

Table of Contents

Installation

Specifications

(Always read these instructions before using this equipment)

For personnel and product safety please read the contents of these operating instructions carefully before using. Make sure that the end users read this manual and then keep the manual in a safe place for future reference. Make sure to deliver this manual to the end-user.

If you are considering using this instrument for special purpose such as nuclear power plants, aerospace, medical care or passenger vehicles please refer to our sales representative.

HAZARD SYMBOLS

⚠️

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, service or maintain it. Terminal of control power (MA, MB) and voltage inputs (P1, P2, P3, PN) have hazards of electric shock, explosion, or arc flash. Turn off power supplying this device and the equipment in which it is installed before working on it.

⚠️CAUTION

The above Indicates that incorrect handling may cause hazardous conditions. Always follow the instructions because they are important to personal safety. Otherwise, it could result in electric shock, fire, erroneous operation, and damage of the instrument. If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

■ Normal service conditions

Use the instrument in an environment that meets the Normal service conditions as following points:
- Ambient temperature: -5 to +55°C
- Average day temperature: 35°C or less
- Humidity: 0 to 85%RH, non condensing.
- Altitude: 2000m or less
- Pollution Degree: 2 or less (Note 1)
- Atmosphere without corrosive gas, dust, salt, oil mist.
- Indoor use
- Transient over voltage: 4000V or less (Note 1)
- A place without excessive shocks or vibration.
- Do not expose to rain and water drips.
- Do not expose to direct sunlight.
- An area in where no pieces of metal and an inductive substance disperse.
- Do not expose to strong electromagnetic field and ambient noises.

Note 1. For the definition of the Pollution Degree and the Transient over voltage category, refer to EN61010-1:2010.

■ Installation instructions

Make sure to read this manual carefully before Installation and Wiring.

<table>
<tr><td rowspan="2" style="vertical-align:middle">⚠️CAUTION</td><td colspan="4">
● This instrument should be installed and used by a qualified electrician.
● The instrument must not be powered and used until its definitive assembly on the cabinet's door.
● The instrument is to be mounted on a panel. All connections must be kept inside the cabinet.
● Verify the following points:
  ■Auxiliary power supply and measuring ratings.
</td></tr>

⚠CAUTION

- Do not drop this instrument from high place. If you drop it and the display is cracked, do not touch the liquid crystal or get it in your mouth. If the liquid crystal is touched, wash it away at once.
- Work under the electric outage condition when installing and wiring. It may cause electric shock, electric burn injury or damage of the device.
- When tapping or wiring, take care not to entering any foreign objects such as chips and wire pieces into this instrument.
- If the terminal wiring is pulled with a strong force, the terminals may detach. (Tensile load: 39.2N or less)
- When wiring in this instrument, be sure that it is done correctly by checking the instrument 's wiring diagram. Wrong wiring may cause failure of the instrument, a fire or electric shock.
- Use electrical wire sizes compatible with the rated current. Use of unsuitable sizes may cause heat generation, which may lead to a fire.
- Tighten the terminal screws with the specified torque and use the suitable pressure connectors and suitable wire size. (Refer to page 90)
- In order to prevent invasion of noise, do not bunch the control wires or communication cables with the main circuit or power wire, or install them close to each other. The distance between communicational signal lines, input signal lines and power lines, and high voltage lines when running parallel to each other are shown below.

Conditions	Length
Below 600V, or 600A power lines	30cm or more
Other power lines	60cm or more

- Protective conductor terminals for mains circuits shall be at least equivalent in current-carrying capacity to the mains supply terminals.
- If the protective conductor terminals are also used for other bonding purposes, the protective conductor shall be applied first and secured independently of other connections.

■ Matters concerning the precaution before use
- Use the instrument in the specified usage environment and conditions.
- The setting of this instrument is necessary before use it. Please read this manual carefully to ensure correct setting.
- Confirm the rating of this instrument, and supply power voltage within the specified range.

Safety Precaution

■ Operation instructions
- Before operating the product, check that active bare wire and so on does not exist around the product. If any bare wire exists, stop the operation immediately, and take an appropriate action such as isolation protection.
- In the event of a power outage during the setting, the instrument is not set correctly. Please set again after power recovery.

⚠CAUTION	- Do not disassemble or modify this instrument. It may cause failure, malfunction, injury or fire. - Use this instrument within the ratings specified in this manual. If it is used outside the ratings, it may cause not only malfunction or failure but also fire burnout. - Do not open the secondary side of the CT circuit. If the CT is not connected properly or if the secondary side of the CT is open, it may result in high voltage on the secondary side of the CT, the insulation of the secondary winding wire may be damaged, and burnout may be caused. - When the external terminals are connected to the external equipment, the instrument and the external equipment must not be powered and used until its definitive assembly on the cabinet's door. - The rating of the terminal of the external equipment should satisfy the rating of the external terminal of this instrument.

■ Maintenance instructions
- Wipe dirt off the surface with a soft dry cloth.
- Do not contact a chemical dust cloth to the instrument for a long time, or do not wipe it with benzene, thinner, alcohol.
- Check for the following items to use this instrument properly for long time.
  (1)Daily maintenance
  ①No damage on this instrument
  ②No abnormality with LCD indicators
  ③No abnormal noise, smell or heat
  (2)Periodical maintenance (Once every 6 months to 1 year)
  - No looseness with installation and wire connection

⚠CAUTION	Do periodical maintenance under the electric outage condition. Failure to do so may cause electric shock, failure of the instrument or a fire. Tighten the terminal regularly to prevent a fire.

■ Storage conditions
To store this instrument, turn off the power and remove wires, and put it in a plastic bag.
For long-time storage, store at the following places. Failure to follow the instruction may cause a failure and reduced life of the instrument.
- Ambient temperature the: -25 to +75°C
- average day temperature: 35°C or less
- Humidity range 0 to 85%RH, non-condensing.
- Atmosphere without corrosive gas, dust, salt, oil mist.
- A place without excessive shocks or vibration.
- Do not expose to rain and water drips.
- Do not expose to direct sunlight.
- An area in where no pieces of metal and an inductive substance disperse.

Safety Precaution

■ Guarantee
- Gratis warranty is effective until the earlier of 1 year after the date of your purchase or 18 months after manufacturing.
- The gratis warranty shall apply if the product fails even though it is being used properly in the conditions, with the methods and under the environments in accordance with the terms and precautions described in the catalogs, the instruction manual, caution label on the product, etc.
- Repair shall be charged for the following cases even during the gratis warranty period.
  ① Failures occurring due to your improper storage or handling, carelessness or fault.
  ② Failures due to faulty workmanship
  ③ Failures due to faults in use and undue modification
  ④ Failures due to accidental force such as a fire, abnormal voltage, etc. and force majeure such as an earthquake, wind, flood, etc.
  ⑤ Failures due to matters unpredictable based on the level of science technology at the time of product.
- Our company shall not be liable to compensate for any loss arising from events not attributable to our company, opportunity loss and lost earning of the customer due to failure of the product, and loss, secondary loss, accident compensation, damage to other products besides our products and other operations caused by a special reason regardless of our company's predictability

■ Replacement Cycle
Although it depends on the status of use, 10 years is the guideline for renewal.

■ Disposal
- When disposing of this product, treat it as industrial waste.
- A lithium battery is embedded in the optional plug-in module: ME-0000BU-SS96. Lithium batteries are disposed of according to local regulation.
- In EU member states, there is a separate collection system for waste batteries. Dispose of batteries properly at the local community waste collection/recycling center.
  The symbol shown below is printed on the packaging of ME-0000BU-SS96.

Note: This symbol is for EU member states only.
The symbol is specified in the new EU Battery Directive (2006/66/EC) Article 20 "Information for end-users" and Annex II.
The symbol indicates that batteries need to be disposed of separately from other wastes.

⚠CAUTION	A lithium battery is embedded in the optional plug-in module: ME-0000BU-SS96. Therefore, if it will be thrown in fire, evolution of heat, burst or ignition may occur. Lithium batteries are disposed of according to local regulation.

■ About packaging materials and this manual
For reduction of environment load, packaging materials are produced with cardboard, and this manual is printed on recycled paper.

EMC Directive Instruction

This section summarizes the precautions on conformance to the EMC Directive of the cabinet constructed using this instrument.

However, the method of conformance to the EMC Directive and the judgment on whether or not the cabinet conforms to the EMC Directive has to be determined finally by the manufacturer.

This instrument complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This instrument may not cause harmful interference, and (2) this instrument must accept any interference received, including interference that may cause undesired operation.

1. EMC Standards
- EN 61326-1
- EN 61000-3-2
- EN 61000-3-3

2. Installation (EMC directive)

The instrument is to be mounted on panel of a cabinet.

Therefore, the construction of a cabinet is important not only for safety but also for EMC.

The instrument is examined by the following conditions.
- Conductive cabinet is used.
- Six faces of a cabinet have to be ensured conductivity for each other.
- A cabinet has to be connected to earth by a thick wire of low impedance.
- Holes on faces of cabinet have to be 10 cm or less in diameter.
- The terminals for protective earth and functional earth have to be connected to earth by a thick wire of low impedance. (A terminal for protective earth is important not only for safety but also for EMC.)
- All connections must be kept inside the cabinet.
- Wirings outside the cabinet have to be used with the shielded cable.

   The following diagram shows how to provide good contact of the shielded cable.
   - ・Remove part of the outer cover.
   - ・Remove part of the paint musk on the cabinet.
   - ・Connect those parts with the clamp.

No.	Segment Name	Description
1	LEAD status	They show direction of Power Factor or Reactive Power on bar graph.
2	LAG status	They show the type of counting of Reactive Energy on Reactive Energy Display.
3	Scale of the bar graph	They show the scales of the bar graph.
4	Under scale input	Turns on when measuring values fall below the minimum scale.
5	Over scale input	Turns on when measuring values exceed the maximum scale.
6	Index indicator	When upper/lower limit alarm set, flickers at the limit setting value.
7	Bar graph status	They show the item expressed with the bar graph. When the item is the same as a digital displayed item, indicated with「▶」, otherwise indicated with「⬏」
8	Phase status	They show the phase for each of the digital displays.
9	Digital display	Measured values displayed in digital.
10	Unit	Units of measuring value displayed.
11	Metering status	Flickers when counting active energy.(Note.1)(only active energy imported display)
12	Harmonics	Turns on when harmonics displayed.
13	Setup status	Turns on at setting mode. (SET) Flickers at setting value confirmation mode. (SET)
14	Test mode status	Turns on at the test mode.
15	Clock status	Turns on when Operation time displayed.
16	Upper/lower limit alarm status	Flickers when upper/lower limit alarm is generated.
17	Communication or Logging status	*(see table below)*

Specification	On	Blinking	Off
CC-Link communication	Normal	CC-Link version mismatch Hardware error	Hardware error
MODBUS®RTU communication MODBUS®TCP communication	Normal	Communication error (Such as wrong address)*1	Hardware error
Logging function	Normal	Error such as incorrect setting, SD memory card error, low battery voltage)*1	Hardware error

*1. For details, refer to Section 6.6.(page 86).

Note 1. The blinking cycle is constant regardless of the size of the measured input.

1. Display and Button Functions of Each Parts

Functions of operation buttons

The operation buttons have various functions
According to how they are pressed down.

SET   −   +   RESET MAX/MIN   PHASE   DISPLAY

Set button
+/−button   Maximum/Minimum button   Display button
Reset button   Phase button
Meaning of code: ○(press), □(press on over 1 second), ◎(press on over 2 seconds), —— (press simultaneously)

Mode	Operation	SET	−	+	RESET	MAX/MIN	PHASE	DISPLAY	Function
Operation mode	Display changes operation							○	Display changes.
		○						○	Display changes.(reverse direction)
							○		Phase changes.
						○			Mode changes to the max./min. display and the instantaneous display
			○	○					The item expressed with the bar graph is changed. / Harmonics number changes when harmonics displayed.
								◎	Displays change cyclically. (Refer to page 65)
							◎		Phases change cyclically. (Refer to page 65)
			◎ — ◎						Change the unit of Wh, varh and VAh, etc. (Refer to page 68)
	Measured value is reset/ Canceling the alarm, etc				◎				Maximum values and minimum values on the display are reset to the present value. — Only available for maximum/minimum value display
			◎ — ◎						All of the Maximum values and minimum values are reset to the present value. — Only available for maximum/minimum value display
		◎ —————— ◎ ———— ◎							Wh, varh, VAh are zero reset. (All of the counting values are zero reset.)
			◎ — ◎						Periodic active energy is zero reset. (Only effective in Periodic active energy display)
		◎ — ◎							Adjusting rolling demand time(Only effective in rolling demand display)
			◎ — ◎						Resetting the peak value of rolling demand (Only effective in rolling demand display)
						◎			The operation time is zero reset (Screen operation time only)
					○				An alarm condition is canceled. (Screen element is canceled) — Available only when manual cancelation is set
					◎				All alarm conditions are canceled. (Element is canceled for all screens) — Available only when manual cancelation is set
					○				Stopping backlight flickering alarm. (Only effective in setting backlight flicker)
					◎				The latching data of digital input on the display is canceled. (Available only for contact point input screen)
	Mode changes	◎ ——————— ◎							The display of Setting mode appears.
		◎							The display of Set value confirmation mode appears.
			◎ ———— ◎						The display of password protection mode appears.
Setting/ Setting value confirmation mode	Setting operation	○							The setting items are saved, and setting item is changed to next item.
								○	Back to the previous item.
			○ □	○ □					The values of setting are changed. (If it presses for 1 sec or more fast forward or fast return.)
		□							Back to the setting display.
		○							Save the settings(Only effective in End display)
		○							Cancel the settings(Only effective in CANCEL display)
	Special operation					□ ——— □			Meter restart(Only effective in CANCEL display)
			◎ ————————— ◎						Returns set contents to the default settings (the default values, Only effective in CANCEL display) (Refer to page 52)

Note: While the back light is off, if the operation button is pressed, the back light is always lit. If the operation button is pressed once again, the function in the above table appears.

⚠CAUTION
● If the function of "maximum value and minimum value reset" and "Wh, varh, VAh zero reset" are done, data will be lost. If this data is needed, please record the data before the reset operation.
● If the function of "meter restart" is done, the entire measurement(measurement display, alarm, analog output, pulse) stops.

1. Display and Button Functions of Each Parts

LEDs of the Optional plug-in module

■LEDs of ME-0000MT-SS96
No.	Name		Function
1)	ERR. LED		This indicates a communication error state of ME-0000MT-SS96
		OFF	Normal
		Blink	MODBUS TCP® communication error as follows was detected. ・MODBUS TCP® application protocol header was incorrect. ・Function code was incorrect(Serial only code was received), etc. When correct request is received, this LED turns off.
2)	10/100 LED		This indicates the transmission speed.
		ON	100Mbps or not connected.
		OFF	10Mbps
3)	LINK/ACT LED		This indicates the link status.
		ON	Link is good.
		Blink	Blinks when data send or receive.
		OFF	Not linked

■LEDs of ME-0000BU-SS96
No.	Name		Function
1)	LOG. LED		This indicates a state of logging operation.
		ON	Logging is running.
		OFF	Logging is stopped.
		Blink slowly (0.5s:on/ 0.5s:off)	Change of logging condition settings finished. Blink of LED lasts 5 second.
		Blink quickly (0.25s:on/ 0.25s:off)	When Setting of Logging-item pattern is LP00, Setting data file needed to store in SD memory card was incorrect. LED blinks until correct setting is done.
2)	SD C. LED		This indicates a state of communication with the SD memory card.
		ON	Communicating
		OFF	Stop communicating
		Blink quickly (0.25s:on/ 0.25s:off)	SD memory card error. Check whether the SD memory card is write-protect and SD memory card capacity is sufficient or not.
3)	BAT. LED		This indicates a state of battery voltage.
		OFF	Normal
		ON	The battery is low voltage.

2. Function Modes

The following function modes are available for this Multi-Measuring instrument. Operation mode is displayed after auxiliary power turns on. It is then possible to switch to the desired mode.

Mode	Description	Reference Pages
Operation Mode	This mode is for displaying each measured value using digital numerical values and bar graphs. Operation mode contains "Current Value Display" that displays the current value, and "Maximum/Minimum Value Display" that displays old maximum/minimum values. In addition, for each display, the cyclic display function can be used to switch between the screens every 5 seconds.	P.63 to P.76
Setting Mode	This mode is for changing the setting values related to measurement and output functions. The following special operations can be executed from the "CANCEL Display" for changing/cancelling setting values. ●The instrument is reset. ●Reset the settings to the factory defaults	P.16 to P.49 P.51 to P.56
Setting Value confirmation mode (Test Mode)	This mode is for confirming the setting values for each setting item.(In this mode, settings cannot be changed in order to prevent accidental changing of settings.) This mode contains test functions that can be used for equipment startup. ●Analog Output Adjustment: Analog output can be adjusted (zero adjustment and span adjustment). ●Output Test: Analog output can be switched, pulse output can be executed, and alarm contact points can be opened/closed without measurement input (voltage/current). ●Communication Test: Fixed numerical data can be returned without measurement input (voltage/current).	P.50, P.57 to P.62

■Diagram of Each Mode
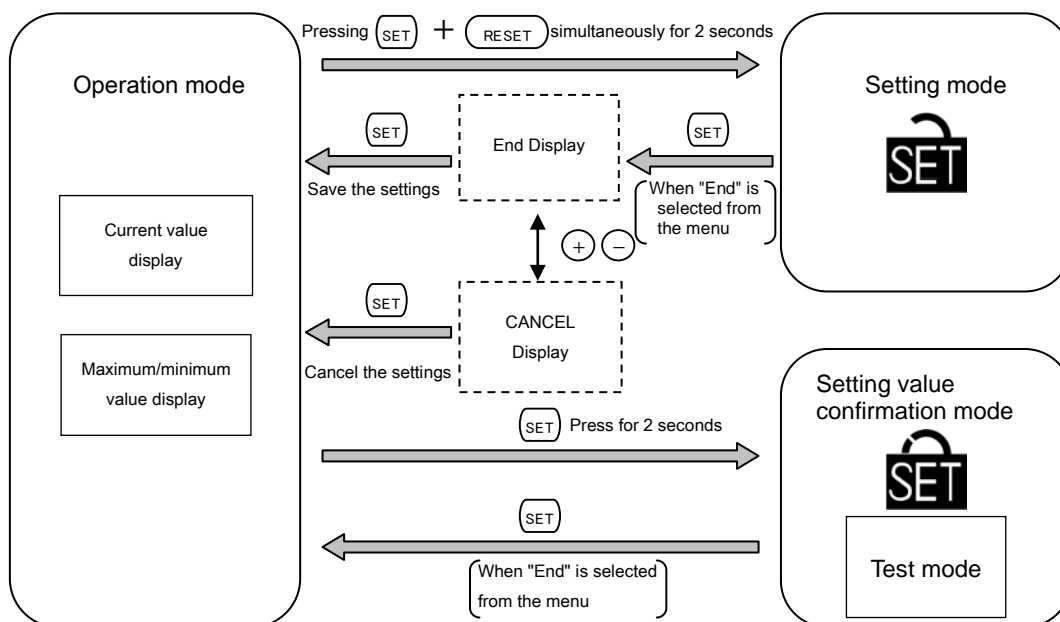

3. Setting

3.1. Setting flow

To measure, it is necessary to use Setting mode to set the phase wire system, VT / direct voltage, and CT primary current.
From Operation mode, move to Setting mode and then set necessary items. Factory default settings will be used for items that you do not set.
Only the settings in Setting menu 1 (basic setting) are needed for normal use. For more information about the settings, refer to page 22 and after.
For more information about the factory default settings, refer to the setting table on page 104.

16

3.1. Setting flow

<Setting Procedure>

① Press (SET) and (RESET) simultaneously for 2 seconds to get in the setting mode.

② Select a setting menu number by (+) or (−).

③ Use the (SET) button to select a setting menu number.

④ Set each setting item. (Refer to page 22 and later pages.)

⑤ After completion of setting, select 'End' in the setting menu and press (SET).

⑥ When the End display appears, press (SET) once again.

3. Setting

Basic Operations for setting

| Function	Operation	Remarks
Select a set value	Press (+) or (−).	Fast-forward when pressed over 1 sec.
Setting items are saved	Press (SET).	Setting item will be cared and shift to the next item.
Go back to the previous setting item	Press (DISPLAY).	The set value for the setting item just before
Skip removing setting items during setting	Press and hold (SET) for 1 sec.	Skip removing setting items returning is still available.

3.2. Setting Menu 1: Basic Settings (Setting the Phase Wire System, Display Pattern, VT/Direct Voltage, CT Primary Current, etc.)

Set the phase wire method, display pattern, VT/direct voltage, CT primary current, etc.

In the operation mode, after pressing (SET) and (RESET) simultaneously for 2 seconds or more, the following operation becomes available.

Setting Menu

Set the setting menu number to "1".
(as shown in the right figure)

①Phase Wire system

Set the phase wire system.

3P4　　　 : 3-phase 4-wire
3P3. 2CT : 3-phase 3-wire（2CT）
3P3. 3CT : 3-phase 3-wire（3CT）
1P3. 1N2 : 1-phase 3-wire（1N2 display）
1P3. 1N3 : 1-phase 3-wire（1N3 display）
1P2　　　 : 1-phase 2 -wire
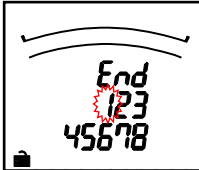

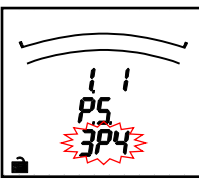

Supplemental Information:
Underlined portions indicate the default values.
(Same from here.)

②Display Pattern

Set the display pattern.
The following table shows the measurement elements that can be displayed by each display pattern. (For more details about display patterns, refer to page 77,78.)
In addition, if there is no display pattern that you want from P01 to P13),
select the special display pattern P00 to configure the screen freely.
(For more information about setting the special display pattern P00, refer to page 53,54)

○：Displayable at this display setting.
△：Set at other additional settings.
□：Select "P00" and set the display order and display position.

⑤Power factor scale

Set the power factor scale.
 If you have not set power factor to "Display pattern",
 this display will be skipped.

-0.5 to 1 to 0.5 ⟷ -0 to 1 to 0

DISPLAY SET

⑥Expanded counting

Set the combinations of imported / exported and lag / lead for active energy and reactive energy you want to display, and set the measurement method for reactive energy.

Combination (Setting value)	Display						Reactive energy measurement method
	Wh		varh				
	Imported	Exported	Imported		Exported		
			lag	lead	lag	lead	
I	○		○				2 quadrant measurement
II	○		○	○			
III	○	○	○		○		4 quadrant measurement
IV	○	○	○	○	○	○	

 Note: For more information about the measurement method for reactive energy, refer to page 69.
Combination I, II ⇒It is suitable for the counting of equipment without the private electric generator and the reactive power of the capacitor load at the power factor = 0, generally.
Combination III, IV⇒It is suitable for the counting of equipment with the private electric generator.

＜Example Screen＞

| Combination I | Combination II | Combination III | Combination IV |

in :Imported **out** :Exported **⊣⊢LEAD** :lead varh **LAG** :lag varh

Depending on the above combination and the measurement element which set in ②Display pattern of the setting menu 1, the energies displayed at the additional screen are as below.

	Additional Screen			
Wh	Wh	-Wh	—	—
-Wh	—	—	—	—
varh	varh	varh(imported LEAD)	varh(exported LAG)	varh(exported LEAD)
VAh	VAh	—	—	—

 Note: Wh:Wh(imported), -Wh:Wh(exported), varh:varh(imported LAG)

DISPLAY SET

⑦Harmonics

Set "on or off" of the harmonic measurement display.

oFF ⟷ on

(Not displayed)   (Displayed)
When the display is set to "on," the harmonic measured value can be displayed on an additional screen of the display pattern.

SET

Setting Menu
According to the setting flow (page 16 to 21), save the changed contents, or continue to the other setting menu.

Note

●Accuracy is defined to rated current. Although the maximum scale may display 120% or more of rated current and rated voltage in order to make a scale easy to read depending on the settings of VT/direct voltage and CT primary current, current input is within 100% of rated current.

●Even if a display pattern is selected that cannot display active power, reactive power, active energy, and reactive energy, it is possible to display the sign according to 2 quadrant / 4 quadrant measurement of the power factor and reactive power due to ⑥Expanded counting , so setting items for ⑥Expanded counting will be displayed.

3.7. Setting Menu 4: LCD Settings (Setting Model Display, Version Display, Backlight, and Display Update Time)

This section is for confirming the model, option code and the product version, and also set the backlight and the display update time. In the operation mode, press $\boxed{\text{SET}}$ + $\boxed{\text{RESET}}$ simultaneously for 2 seconds or more, and the following operation becomes available.
Setting menu

Set the setting menu number to "4".
(as shown in the right figure)

```

①Alarm item 1

(2) For other phase wire system except 3-phase 4-wire

non	DW upper limit
A upper limit	var upper limit
A lower limit	var lower limit
DA upper limit	Dvar upper limit
DA lower limit	DVA upper limit
V upper limit	PF upper limit
V lower limit	PF lower limit
W upper limit	Hz upper limit
W lower limit	Hz lower limit
	Harmonic current total RMS value
	Harmonic voltage total distortion ratio

Note 1. Measurement items that are not selected in the display pattern can be selected.
Note 2. DA: Current demand, DAN: N-phase current demand,
V (L-N): Phase to neutral voltage, V (L-L): phase to phase voltage,
DW: Active power rolling demand, Dvar: Reactive power rolling demand,
DVA: Apparent power rolling demand

3.8. Setting Menu 5: Pulse and Alarm Settings (Setting Upper/Lower Limit Alarm, Motor Starting Current Mask Function, Pulse Output, etc.)

②Alarm value 1

Set the alarm value for upper/lower limit alarm element 1. The following table shows the setting range.

Measuring element	Setting range	Setting step(Note)
A, AN, DA, DAN upper limit	5 to 100 to 120(%)	1%
A, DA lower limit	3 to 10 to 95(%)	1%
V (L-N), V (L-L) upper limit	25 to 110 to 135(%)	1%
V (L-N), V (L-L) lower limit	20 to 70 to 95(%)	1%
W, var upper limit	-95 to 100 to 120(%)	1%
W, var lower limit	-120 to 3 to 95(%)	1%
DW, Dvar, DVA upper limit	5 to 100 to 120(%)	1%
PF upper limit	-0.05 to 1 to 0.05	0.05
PF lower limit	-0.05 to -0.5 to 0.05	0.05
Hz upper limit	45 to 65(Hz)	1Hz
Hz lower limit	45 to 65(Hz)	1Hz
Harmonic current total RMS value	1 to 35 to 120(%)	1%
N-phase harmonic current total RMS value	1 to 35 to 120(%)	1%
Harmonic voltage total distortion ratio	0.5 to 3.5 to 20.0(%)	0.5%
Note:W, var, DW, Dvar,DVA and var show the percentage for the maximum scale value (±0 step).
   A, AN, DA, DAN, Harmonic current total RMS value, N-phase harmonic current total RMS value shows the percentage for the CT primary current.
   "V" shows the percentage for the VT primary voltage (or direct voltage).
    (The "V" for 1-phase 3-wire is the percentage for phase to neutral voltage.
    Alarm monitoring is executed using twice the value which set upper/lower limit alarm for the 12-phase and 13-phase.)
DISPLAY SET
③Alarm item 2 to 4

Set the measurement element assigned to the upper/lower limit alarm items 2 to 4. Elements that are set elsewhere cannot be set.

The setting method is the same as ①Alarm item 1 .

DISPLAY SET

④Alarm value 2 to 4

Set the alarm value for the upper/lower limit alarm items 2 to 4.

The setting method is the same as ②Alarm value 1 .

DISPLAY SET

⑤Alarm delay time

Set the alarm mask time for when you want to prevent a momentary overload or noise alarm.
When this is set, an alarm is generated only when the alarm value over the upper/lower limit alarm value for a longer time than the delay time. On the setting screen, seconds are indicated by "s" and minutes are indicated by "min".
0s	30s	2min
5s	40s	3min
10s	50s	4min
20s	1min	5min

Note：
When all settings for ①Alarm item 1 and ③Alarm item 2 to 4 are set to "non", this setting will be skipped.

DISPLAY SET

⑥Alarm cancel method

Set the alarm cancel method at generation of alarm. (screen, relay)

| Reset method (Setting value)	Description (Refer to pages 71 and72)
Automatic (Auto)	When there is no alarm generation condition, alarm is automatically reset.
Manual (HoLd)	The alarm will continue even when the alarm generated conditions no longer exist. It is necessary to execute button operation to cancel the alarm.

Note: When all settings for ①Alarm item 1 and ③Alarm item 2 to 4 are set to "non," this setting will be skipped.

DISPLAY SET

Section (A)　　Section (B)

Note: The segment shown in The left table flickers according to the selected element.

DISPLAY / SET

⑪Pulse output 1 pulse unit

Set the pulse value of pulse output 1.

Pulse value is selected from the table below, according to total load power[kW].

In the following cases, this display will be skipped.
・ME-4210-SS96 optional plug-in module is not installed.
・Not set "PULSE" to ⑨Pulse/Alarm output 1.
・Set "non" to ⑩Pulse output 1 output item.

$$\text{Total load power[kW]} = \frac{\alpha \times (\text{VT primary voltage}) \times (\text{CT primary current})}{1000}$$

$$\begin{pmatrix} \alpha : 1 & \text{1-phase 2-wire} \\ 2 & \text{1-phase 3-wire} \\ \sqrt{3} & \text{3-phase 3-wire} \\ 3 & \text{3-phase 4-wire} \end{pmatrix}$$

*1: For 3-phase 4-wire setting, the VT primary voltage is calculated using the phase to neutral voltage.
*2: For 1-phase 3-wire setting, the VT primary voltage is calculated using the phase to neutral voltage.
*3: For direct voltage setting, the direct voltage is used for calculation instead of the VT primary voltage.

Total load [kW]	Possible pulse unit settings				
Less than 10	1	0.1	0.01	0.001	kWh/pulse
10 or higher but less than 100	10	1	0.1	0.01	
100 or higher but less than 1000	100	10	1	0.1	
1000 or higher but less than 10000	1	0.1	0.01	0.001	MWh/pulse
10000 or higher but less than 100000	10	1	0.1	0.01	
100000 or higher	100	10	1	0.1	

Note 1: When ⑩Pulse output 1 output item is set to "non", this setting will be skipped.
Note 2: The factory default setting values are minimum values for the pulse unit that can be set.
Note 3: For reactive power, kW in the above table needs to be read as kvar, kWh needs to be read as kvarh, and MWh needs to be read as Mvarh.
Note 4: For apparent power, kW in the above table needs to be read as kVA, kWh needs to be read as kVAh, and MWh needs to be read as MVAh.

DISPLAY / SET

3.8. Setting Menu 5: Pulse and Alarm Settings (Setting Upper/Lower Limit Alarm, Motor Starting Current Mask Function, Pulse Output, etc.)
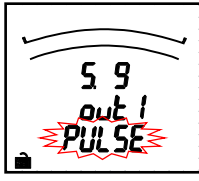

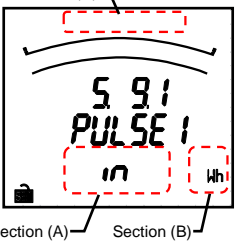

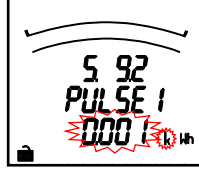

⑫Pluse/Alarm output2

Note 1: The same measurement item can be set for each analog output.
Note 2: It is possible to select measurement item that are not included in the set display pattern.
Note 3: Setting to "non" are minimum output. In addition, it moves to the next analog output setting.
Note 4: Underlined portions are the factory default settings for measurement elements assigned to each analog output.
Note 5: VA is output by scaling 0 to 100% of the rating.
Note 6: When Frequency(Setting menu 1.5) is set to "50Hz", Hz is output by a scale form 45Hz to 55Hz.
　　　　When Frequency(Setting menu 1.5) is set to "60Hz", Hz is output by a scale form 55Hz to 65Hz.
Note 7: For the harmonic current, the total RMS value is output by a scale from 0 to 60%of the rating.
　　　　For the harmonic voltage, the total distortion ratio is output by scaling 0 to 20%.

DISPLAY SET

3.9. Setting Menu 6: Setting the Analog Output

Analog output CH1 detailed setting

(The following setting can be made separately from the measurement items included in the display pattern.)

(1)Set the current / current demand / voltage / active power / reactive power / power factor for analog output.(Setting menu 6.1.1)

Output item	Setting range　*2
A Demand A	Primary Current (1.4.1 Primary Current Setting value) ◄──────► SP.(Special Setting)
V	+10 STEP (About 250%) 〜 ± 0 STEP (100%　:standard maximum scale value)　(+)(−) 〜 -18 STEP (About 20%)
W var	+ 3 STEP (About 120%) 〜 ± 0 STEP (100%　: Rating)　(+)(−) 〜 -18 STEP (About 20%)
PF	-0.5 to 1 to 0.5 ◄──────► -0 to 1 to 0

mA graphs:
20, 12, 4 — -0.5 1 0.5 and -0 1 0

(2)Set the current / current demand / active power for analog output.
(Setting menu 6.1.2)

Output item	Setting range　*2
A Demand A	+3 STEP (About 120%) 〜 ±0 STEP (100%　: Rating)　(+)(−) 〜 -10 STEP (About 40%)
W	Single deflection ◄──────► Double deflection

＜Single deflection＞　　＜Double deflection＞
mA: 20, 4 — 0 to 40kW
mA: 20, 12, 4 — -40kW, 0, 40kW

*1. When var or PF are set as output items, it moves to the next analog output settings.
*2. Detailed setting values are according to the values shown in the table on Section 6.3.

on ：－1%

Note: When the output items for all analog output are set to "non," this setting is skipped.

Setting Menu

According to the setting flow (page 16 to 21), save the changed contents, or continue to the other setting menu.

3.10. Setting Menu 6: Setting the Logging function

This section shows how to set the logging function. When the ME-0000BU-SS96 optional plug-in module is not installed, this menu will be skipped.
In the operation mode, press (SET) and (RESET) simultaneously for 2 seconds or more, and the following operation becomes available.

Setting Menu

DISPLAY SET

Set the setting menu number to "6".
(as shown in the right figure)

①Logging ID

Set the ID number of the optional plug-in module: ME-0000BU-SS96.

Settable ID : 001 to 255

When ID number installed of the optional plug-in module is set,
that ID number is appeared as the initial value.

| Note | If ME96SS cannot receive the setting value of logging ID from ME-0000BU-SS96, the screen does not appear. Just wait there for a moment. |

DISPLAY SET

②Logging Data Clear

Clears logging data memorized in optional plug-in module:
ME-0000BU-SS96.

no ←→ yES
(Not clear)   (Clear)

When "yES(Clear)" is selected at the above setting, the confirmation screen appears
in order to reconfirm whether the logging data can be cleared or not.

no ←→ yES
(Not clear)   (Clear)

DISPLAY SET

③Logging-item pattern

Set the Logging-item pattern to select the logging items.

Settable pattern : ⤷LP01 ←→ LP02 ←→ LP00⤶

When LP00 is set, you can choose any 6-item.
(For details of LP00, refer to following manual:
 ME-0000BU-SS96:Logging specifications .... LSPM-0092)
The logging-item pattern of LP01 and LP02 is defined as follows.

"Detailed data" is memorized shorter cycle than "One-hour data".
Logging cycle of "Detailed data" is set in ④Detailed data logging cycle .

Phase-wire setting: 3P4W

Logging-item pattern	LP01		LP02	
	Detailed data	One-hour data	Detailed data	One-hour data
Data 1	Wh(import)	Wh(import)	Wh(import)	Wh(import)
Data 2	varh(import LAG)	Wh(export)	A_{AVG}	Wh(export)

*1: The settings will not return to the default values when the setting is switched only between "1N2 display" and "1N3 display" in the 1-phase 3-wire setting.
*2: Communication optional plug-in module is reset.

3.16. Initializing All Settings

When the following operations are executed, all settings are initialized to the factory defaults. Only the settings are initialized to the defaults. The measured active energy value and operating time etc. are not initialized.

For the initializing of maximum/minimum value, refer to the section 3.15(page 51).
(For example, if the phase wire system is changed by initializing all settings, all maximum/minimum values will be initialized.)

To initialize all settings to the factory defaults, execute the following operation from the CANCEL screen in the setting mode.

For more information about how to get to the CANCEL screen, refer to 3.1.Setting flow (page 16).
Note	Before initializing all settings, output the logging data of ME-0000BU-SS96 to the SD memory card and check the output data in the PC whether the logging data are memorized properly.

3.17. Setting the Special Display Pattern P00

Even if there is no display pattern that you like in the display patterns P01 to P13, individual setting is available by the display pattern P00.

This setting is made in the setting menu 1. Explanation begins with the set "P00" in ②display pattern of the setting menu 1 (page 22). (Others are omitted here, so refer to the setting menu 1.)

（1）The number of settable display is up to 4. And the number of measurement elements to be displayed is up to 12 items.

Screen 4-1	Screen 4-2	Screen 4-3	Screen 4-4
Upper stage: item 1 Middle stage: item 2 Lower stage: item 3 (DISPLAY)	Upper stage: item 4 Middle stage: item 5 Lower stage: item 6 (DISPLAY)	Upper stage: item 7 Middle stage: item 8 Lower stage: item 9 (DISPLAY)	Upper stage: item 10 Middle stage: item 11 Lower stage: item 12 (DISPLAY)

（2）Explanation is made with the example of the following display pattern.
Screen 2-1	Screen 2-2
Upper stage: A Middle stage: V Lower stage: Wh (DISPLAY)	Upper stage: PF Middle stage: W Lower stage: Non (DISPLAY)

（3）Setting method

②Display pattern

Set the display pattern.
（1）Select "P00" .
　　Select "P00" by (+) or (−) and press (SET).

（2）Set the upper stage of the display 4-1 to A.
　　Select "A" by (+) or (−) and press (SET).

（3）Set the middle stage of the display 4-1 to V.
　　Select "V" by (+) or (−) and press (SET) .

（4）Set the lower stage of the display 4-1 to Wh.
　　Select "Wh" by (+) or (−) and press (SET).

53
Continued form the previous page

（5）Set the display of the display 4-2.
Select "yES" by ＋ or － and press SET .

When you do not want to display the display 2,
select "no" and press SET .

SET

（6）Set the upper stage of the display 4-2 to PF.
Select "PF" by ＋ or － and press SET .

SET

（7）Set the upper stage of the display 4-2 to W.
Select "W" by ＋ or － and press SET .

SET

（8）Set the lower stage of the display 4-2 to no display.
Set the unit code of the lower stage to no display
by ＋ or － and press SET .

SET

（9）Set the display 4-3 to no display.
Select "no" by ＋ or － and press SET .

Note: When the display 4-3 is set to no display, the
display 4-4 is also set to no display automatically.
Returns to the setting for
the upper stage of the
display 4-1.
DISPLAY

③VT / direct voltage

(hereafter same as the setting menu 1)

Note	1. The following measurement items cannot be set by the display pattern "P00." Set them separately in the "Setting menu 3", "Setting menu 7" and "Setting menu 8." Reactive energy (imported LEAD), Reactive energy (exported LAG), Reactive energy (exported LEAD), Harmonic current, Harmonic voltage, Periodic active energy, Rolling demand, Digital input, Digital output, Operation time 2. The phases of current and voltage cannot be specified. Press the PHASE button in the operation mode for switching phases. 3. For the settings other than the 3-phase 4-wire setting, the following measurement items cannot be set. N-phase current, N-phase current demand, apparent power, apparent energy

54

3.18. Examples of Simple Settings

The following shows a simple setting example.

■Setting Example　Model: ME96SSHA-MB(Not optional plug-in unit)
　　　　　　　　　Phase wire system : 3-phase 4-wire
　　　　　　　　　Measuring element : A, V, W, PF
　　　　　　　　　Input Voltage :220/380V
　　　　　　　　　CT primary current : 200A
　　　　　　　　　CT Secondary current:5A
　　　　　　　　　frequency :50Hz
　　　　　　　　　MODBUS®RTU：address 1, baud rates 19.2kbps, parity even, stop bit 1

■Setting Procedure
　Items of which setting value need to be changed are indicated by 　　　　.

Note: For more details about setting contents, refer to pages 22 to 25.

Operation mode	
Press SET + RESET simultaneously for 2seconds	
Setting menu	Set the setting menu number to "1" and then press SET.
SET	
Phase wire system	The factory default setting is "3-phase 4-wire," so just press SET.
SET	
Display pattern	Setting is "P01," so just press SET.
SET	
VT/direct voltage selection	The factory default setting is "No VT," so just press SET.
SET	
Direct voltage	The factory default setting is "220/380V," so just press .
SET	
CT secondary current	The factory default setting is "5A," so just press SET.
SET	
CT primary current	Set to "200A" and then press SET.
SET	
frequency	The factory default setting is "50Hz," so just press SET.
SET	
Time constant for rolling demand	The factory default setting is "15min/1min," so just press SET.
SET	
Time constant for current demand	The factory default setting is "0 second," so just press SET.
SET	
Setting menu	Set the setting menu number to "2" and then press SET.
SET	

55

3.18. Examples of Simple Settings

MODBUS®RTU address	→	The factory default setting is "1," so just press SET.
↓ SET		
MODBUS®RTU baud rates	→	The factory default setting is "19.2kbps," so just press SET.
↓ SET		
MODBUS®RTU parity	→	The factory default setting is "EVEn(even)," so just press SET.
↓ SET		
MODBUS®RTU stop bit	→	The factory default setting is "1," so just press SET.
↓ SET		
Setting menu	→	Set the setting menu number to "End" and then press SET.
↓ SET		
End screen	→	Press SET again. The changed setting are determined.
↓ SET		
Operation mode	→	Measurement begins according to the settings you changed.

Test mode includes functions that can be used for start-up of equipment.
The following table shows what can be done in the test mode.

Test menu	Description
1. Communication test	For models with a communication function, it is possible to monitor fixed numerical data without measurement (voltage/current) input. Use this for checking with the host system.
2. Alarm output/Digital output operation test	For functions with alarm output, it is possible to confirm alarm output (digital point output) without measurement (voltage/current) input. Use this for confirming connection with the contacted device.
3. Zero span adjustment for analog output	For functions with analog output, zero span adjustment can be done for analog output. Adjust this when matching with the receiver side and when output changes.
4. Analog output operation test	For functions with analog output, it is possible to confirm analog output operation without measurement (voltage/current) input. Use this for confirming connection with the receiver.
5. Pulse output operation test	For functions with pulse output, it is possible to confirm pulse output operation without measurement (voltage/current) input. Use this for confirming connection with the receiver.

■ Test Procedure
① Press [SET] for 2 seconds to move to the set value confirmation mode.
② Select setting value confirmation menu number "9" by (+) and (−) .
③ Press [SET] to move to test mode.
④ Execute tests using each test menu. (Refer to pages 58 to 62)

■ Test Mode Flow
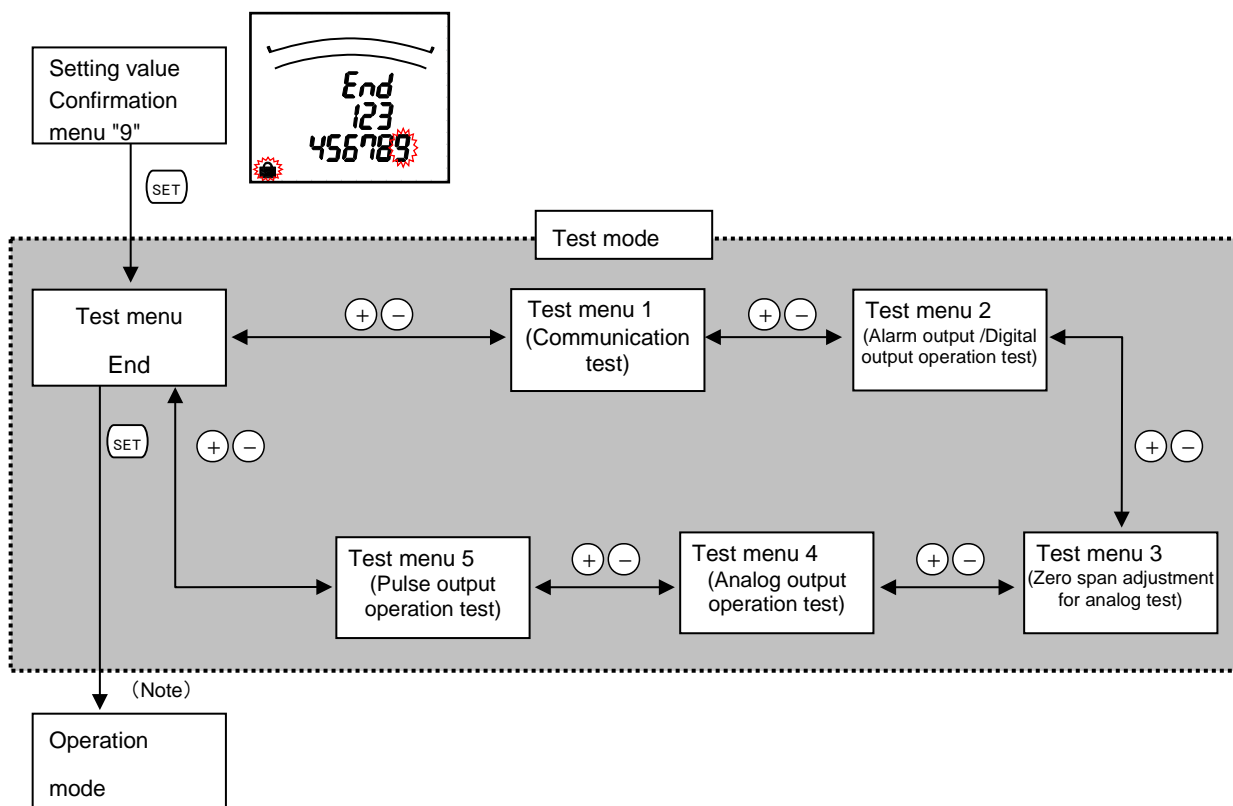

(Note) The screen momentarily turns off.

Note	When moving the test mode, ME-0000BU-SS96 becomes power outage state not to be logging the test data. Therefore, the system log of "Power failure occurred" is recorded in ME-0000BU-SS96 and COM of the LCD is blinking.

4.1. Test Menu 1: Communication Test

In the setting value confirmation mode, when the menu number is set to "9", you will enter the test mode.

Test menu

Set the test menu number to "1".
(as shown in the right figure)

```
MENU
End
12345
TEST
```

SET

Execute communication test operation.
(Values other than zero can be monitored even when the voltage and current are not input.)

■ Monitor value by communication
・ Values displayed on the screen,can be monitored.
Measurement elements not displayed on the screen are zero.
(only power factor is 1.000).
・ If you set the Alarm item with Setting Menu 5, the display will be the same as
the alarm is generating.
（If you are using the ME-4210-SS96, alarm contact will remain open.）
・ It is possible to monitor the digital input status.

■ Display screen

```
0          5
AVG 4600 A
Σ 2145 W
L-NAVG 1034 V
TEST
```

・ As with the operation mode, it is displayed according
to settings such as the display pattern.
・ The maximum/minimum value can be displayed.
(Cyclic display cannot be executed.)

①Communication test

■ Button operation

Operation	Function
Press DISPLAY	Switches the display screen.
Press PHASE	Switches the phase.
Press MAX/MIN	Moves or returns to the maximum/minimum value screen.
Press + or −	Switches the analog bar graph element.
	Switches the harmonic degree (when harmonics screen is displayed).
Press + and − together for at least 2 seconds.	Change the unit of Wh, varh and VAh.
Press SET	Return to the test menu.

Note: When executing a communication test, please read the following manual
in addition to this instruction manual. (For more information refer to page 102.)
・Electronic Multi-Measuring Instrument ME Series MODBUS® Interface specifications
・Electronic Multi-Measuring Instrument Programming Manual (CC-Link communication)

SET

Test menu

<To continue other test mode>
⇒ Select other test menu number and then press SET

<To close test mode>
⇒ Select "End" as the test menu number and then press SET.
You will return to the operation mode.

```
MENU
End
12345
TEST
```

58

4.2. Test Menu 2: Alarm Output/Digital Output Operation Test

The following operations are available in the test mode.
・When the ME-4210-SS96 or ME-0052-SS96 optional plug-in module is not installed, this test menu will be skipped.
・When ⑨Pulse/Alarm output 1(Setting Menu 5) and ⑫Pulse/Alarm output 2(Setting Menu 5) is not set to "AL", this test menu will be skipped.(ME-4210-SS96)

Test menu

Set the test menu number to "2".

```
    MENU
    End
   12345
  TEST
```

DISPLAY SET

①Alarm output/Digital output CH1 operation test

Execute the alarm output/digital output CH1 operation test.
When (RESET)is pressed for 2 seconds, digital output is switched back.

(RESET)Press for 2 seconds
oFF ⟷ on
(Open)   (Close)

Note1: To return to the test menu, turn digital output OFF (open).

Note2: When ⑨Pulse/Alarm output 1(Setting Menu 5) is not set to "AL", this display will be skipped.(ME-4210-SS96)

```
    tESt
    out 1
     on
  TEST
```
The current output status is displayed.

DISPLAY SET

②Alarm output/Digital output CH2 operation test

Execute the alarm output/digital output CH2 operation test.
The test method is the same as
①Alarm output/Digital output CH1 operation test .

Note1: When ⑫Pulse/Alarm output 2(Setting Menu 5) is not set to "AL", this display will be skipped.(ME-4210-SS96)

```
    tESt
    out2
     oFF
  TEST
```

SET

Test menu

<To continue other test mode>
⇒ Select other test menu number and then press (SET).

<To close test mode>
⇒ Select "End" as the test menu number and then press (SET).
   You will return to the operation mode.

```
    MENU
    End
   12345
  TEST
```

4.3. Test Menu 3: Zero Span Adjustment for Analog Output

The following operations are available in the test mode.

When the ME-4210-SS96 optional plug-in module is not installed, this test menu will be skipped.

Test menu

Set the test menu number to "3".

```
MENU
End
12345
TEST
```

↑ DISPLAY ↓ SET

①Analog output CH1 zero adjustment

Execute zero adjustment for analog output CH1.

Possible setting range : -50 to ±0 to +50

Adjustment is possible up to about ±0.3mA

■ Zero adjustment movement

```
RRdJ
2Erol
- 9
TEST
```

Note: For zero adjustment, set the measurement input to zero.

↑ DISPLAY ↓ SET

②Analog output CH1 span adjustment

Execute span adjustment for analog output CH1.

Possible setting range : -50 to ±0 to +50

Adjustment is possible up to about ±0.3mA

■ Span adjustment movement

```
RRdJ
SPRn I
39
TEST
```

Note: For span adjustment, measurement input is necessary.

↑ DISPLAY ↓ SET

③Analog output CH2 to CH4 zero adjustment

Execute zero adjustment for analog output CH2 to CH4.

The adjustment method is the same as ①Analog Output CH1 Zero Adjustment.

↑ DISPLAY ↓ SET

④Analog output CH2 to CH4 span adjustment

Execute span adjustment for analog output CH2 to CH4.

The adjustment method is the same as ②Analog Output CH1 Span Adjustment.

↓ SET

Test menu

<To continue other test mode>
⇒ Select other test menu number and then press (SET).

<To close test mode>
⇒ Select "End" as the test menu number and then press (SET).
You will return to the operation mode.

```
MENU
End
12345
TEST
```

4.4. Test Menu 4: Analog Output Operation Test

The following operations are available in the test mode.
   When the ME-4210-SS96 optional plug-in module is not installed, this test menu will be skipped.

Test menu

Set the test menu number to "4".

DISPLAY SET

①Analog output CH1 operation test

Execute the operation test for analog output CH1. (Input is not necessary.)

Output	Output Specification
	4-20mA
0%	4mA
25%	8mA
50%	12mA
75%	16mA
100%	20mA

0%
25%

Lower   :Setting analog output item
          and the measurement value
          equivalent to the % value

Note: The analog output item set up with Setting the Analog Output (Setting Menu 6) is displayed.

DISPLAY SET

②Analog output CH2 to CH4 operation test

Execute the operation test for analog output CH2 to CH4.

The test method is the same as ①Analog output CH1 operation test .

SET

Test menu

<To continue other test mode>
  ⇒ Select other test menu number and then press SET.

<To close test mode>
  ⇒ Select "End" as the test menu number and then press SET.
    You will return to the operation mode.

4.5. Test Menu 5: Pulse Output Operation Test

The following operations are available in the test mode.
　・When the ME-4210-SS96 optional plug-in module is not installed, this test menu will be skipped.
　・When ⑨Pulse/Alarm output 1(Setting Menu 5) and ⑫Pulse/Alarm output 2(Setting Menu 5) is not set to "PULSE", this test menu will be skipped.(ME-4210-SS96)

Test menu

Set the test menu number to "5".

```
      MENU
       End
     12345
```

DISPLAY SET

①Pulse output CH1 operation test

Execute the operation test for pulse output CH1.
 (Input is not necessary.)
When (RESET) is pressed, 1 pulse is output.

```
     PULSE 1
      0.00 k Wh
   0  0.000 k Wh
```

RESET

$$0 \rightarrow 1 \rightarrow 2 \rightarrow \cdots \rightarrow 49 \rightarrow 50\,[\text{pulse}]$$

Upper	:Pulse output 1
Middle	:Pulse Unit set up with setting menu 5.9.2.
Lower	
Left	:The number of output pulses
Right	:(Pulse Unit)×(The number of output pulses)

Note1: When Pulse/Alarm output 1(Setting Menu 5) is not set to "PULSE", this display will be skipped.(ME-4210-SS96)
Note2: Output is executed according to the set pulse width.
Note3: After reaching 50, the number of output pulses returns to 1.

DISPLAY SET

②Pulse output CH2 operation test

Execute the operation test for pulse output CH2.

The test method is the same as

①Pulse Output CH1 Operation Test .

```
     PULSE 2
      0.00 k Wh
   0  0.000 k Wh
```

 Note: When Pulse/Alarm output 2(Setting Menu 5) is not set to "PULSE", this display will be skipped.(ME-4210-SS96)

SET

Test menu

<To continue other test mode>
 ⇒ Select other test menu number and then press ⌊SET⌋

```
      MENU
       End
     12345
```

<To close test mode>
 ⇒ Select "End" as the test menu number and then press ⌊SET⌋.
   You will return to the operation mode.

5.1. Basic Operation

The following explains basic usages during operation.

- **Switch display**

  By pressing $\boxed{\text{DISPLAY}}$, the measurement display will switch over.

  By pressing $\boxed{\text{DISPLAY}}$ + $\bigcirc$, the measurement display will switch over in reverse.

> Display items and the order differ depending on the phase wire method setting display pattern settings and additional screen. For more information about detailed display patterns, refer to pages 77 and 78.

Example of display switching(Phase wire System: 3-phase 4-wire,display pattern: P01, without additional display)

<Screen 1 of 4>
Upper: Current
Middle: Active Power
Lower: Voltage

<Screen 2 of 4>
Upper: Current
Middle: Active Power
Lower: Power factor

<Screen 3 of 4>
Upper: Current
Middle: Power factor
Lower: Voltage

<Screen 4 of 4>
Upper: Current
Middle: Not displayed
Lower: N-phase current

> When switching screens, the left screen appears momentarily. This screen indicates the number of the next screen being displayed in the total number of screens.

Screen number display

- **Switch phase**

  By pressing $\boxed{\text{PHASE}}$ the current phase and the voltage phase will switch over.

> The phase cannot be switched in the following cases.
> ・ Measurement elements without phase (Frequency)
> ・ Active power, reactive power, apparent power, and power factor for settings other than 3-phase 4-wire
> ・ When the setting is 1-phase 2-wire

Example of phase switching (Phase wire System: 3-phase 4-wire)

Current average
Active Power (total)
Voltage average (line to neutral)

Current phase 1
Active Power phase 1
Voltage phase 1N

Current phase 2
Active Power phase 2
Voltage phase 2N

Current phase 3
Active Power phase 3
Voltage phase 3N

Current phase 3
Active Power phase 3
Voltage phase 31

Current phase 2
Active Power phase 2
Voltage phase 23

Current phase 1
Active Power phase 1
Voltage phase 12

Current average
Active Power (total)
Voltage average (line to line)

5.1. Basic Operation

● **Bar graph display**

Bar graph displays the measurement element indicated with "▶" or "⬆".
(Example) Lower element (V) displayed on bar graph
(Example) PF displayed on bar graph

● **Switching measurement factors displayed on bar graphs**

Press the ⊕ or ⊖ button to switch.

The following example is the case of "3 measuring items of screen are different" or "2 measuring items of screen are same". In the case of "3 measuring items of screen are same", the bar graph of average value or total value appear instead of "▶(Upper)", "▶(Middle)" and "▶(Lower)".

> The bar graph cannot be displayed in the following cases.
> ・When active energy / reactive energy / apparent energy are selected
> ・When a line without measurement display is selected
> ・Rolling Demand Display
> ・Harmonics Display

(1) For 3-phase 4-wire   ⊕ (Clockwise rotation)   ⊖ (Counterclockwise rotation)
*1: "LN","LL" does not appear.

(2) For 3-phase 3-wire, 1-phase 3-wire
(3) For 1-phase 2-wire
5.1. Basic Operation

● **Cyclic Display**

In cyclic display, display and phases automatically change at every 5 seconds.

When (DISPLAY) is pressed for about 2 seconds, the cyclic display appears.

When (PHASE) is pressed for about 2 seconds, the cyclic phase appears.

By pressing any other buttons except (SET), cyclic display mode ends.

Note 1: Before shifting to the cyclic display change screen, the display flickering 3 times.
Note 2: In the cyclic display, drawing number is not displayed.
Note 3: In the maximum value and the minimum value display, cyclic display is not available.

Example Cyclic Display (Phase wire System: 3-phase 4-wire, Display Pattern: P01, without additional screens)

DISPLAY
Press for 2 seconds

Changes automatically

(Displays for 5 seconds)   (Displays for 5 seconds)   (Displays for 5 seconds)   (Displays for 5 seconds)

Changes automatically
● **Harmonics display**

Harmonic RMS value and distortion ratio can be displayed.
It is necessary to set the harmonics display settings before displaying.(Refer to page 32)

■Measurement items

Degree	Harmonic current		N-phase harmonic current		Harmonic voltage	
	RMS value	Distortion ratio	RMS value	Distortion ratio	RMS value	Distortion ratio
Harmonic total	○	○	○	—	○	○
1st	○	—	○	—	○	—
3rd,5th,7th,9th, 11th,13th,15th, 17th,19th,21st, 23rd,25th,27th, 29th,31st	○	○	○	—	○	○

■Example Display

<Example of harmonic current total display>

<Example of harmonic voltage 5th display>
Upper: Degree
Middle: Distortion ratio
Lower: RMS value

Note : Harmonic total is shown by "ALL".

5.1. Basic Operation

● **Harmonics display (Continued from previous page)**

■Switching degree / phase (Phase wire System: 3-phase 4-wire)

Press the ⊕ or ⊖ button to switch the degree.

Press (PHASE) to switch phases.
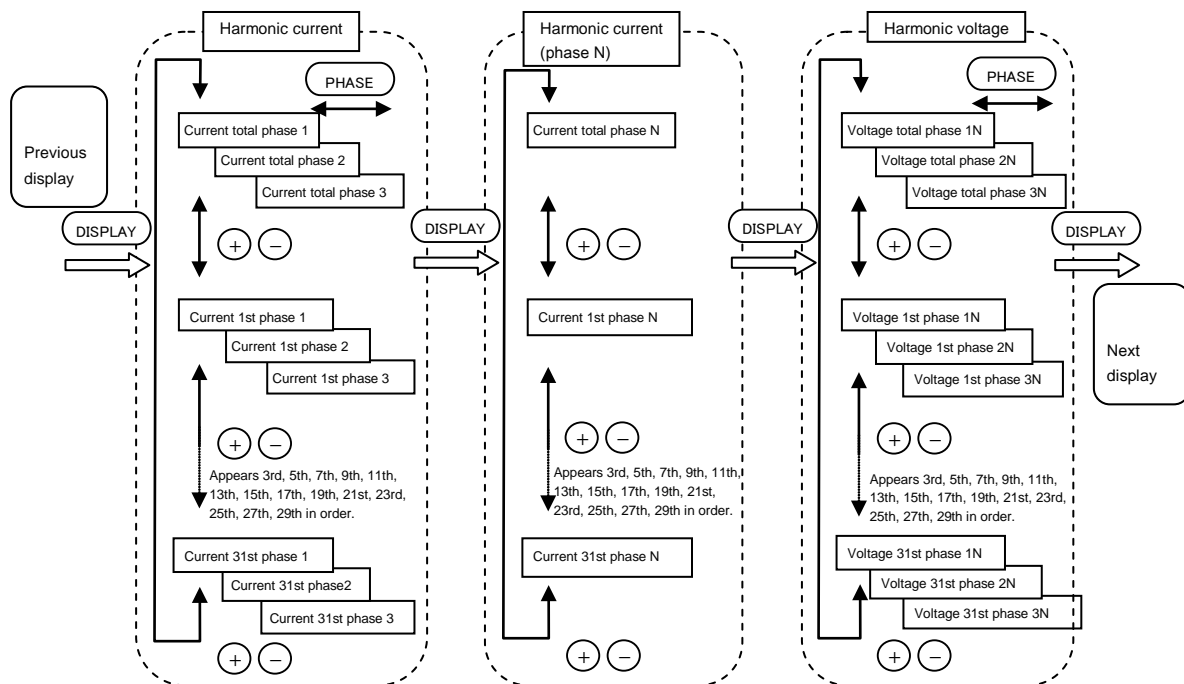

Note: For harmonic measurement, the following phases are not displayed.

Phase wire system		Harmonic current	Harmonic voltage
3-phase 3-wire	3CT	—	31-phase
	2CT	2-phase	31-phase
1-phase 3-wire	1N2 display	N-phase	12-phase
	1N3 display	N-phase	13-phase

5.1. Basic Operation

● **Maximum value and minimum value display**

For the maximum / minimum value display screen, the maximum value, current value,
and minimum value for each measurement item are displayed on one screen.

However, for harmonics only the following maximum values are displayed.
Harmonic current: Total, 1st to 31st (only odd number) effective values for where the phase was largest for each phase.
Harmonic voltage: Total distortion factor, 1st effective value, 3rd to 31st (only odd number) content factors for where the phase was largest for each phase

■ Example Display

＜Example of current＞
The bar graph turns on only between the maximum value and minimum value.

Upper: Maximum value

Middle: Current value

Lower: Minimum value

＜Example of current harmonics＞
Harmonics won't display as bar graph.

Harmonic degree

Maximum value

● **Display of maximum value and minimum value**

When (MAX/MIN) is pressed, the display is changed into the maximum value and minimum value display.
And when (MAX/MIN) is pressed, the display changes back to the present value display.

Example of switching between present value display and maximum/minimum value display
Present value display   Maximum value and minimum value display

On maximum/minimum value display, the following operation is also possible as current value display.

Button operation	Function		
Press (DISPLAY)	Measurement items switch according to the following order. However, measurement items that are not included in the phase wire method display pattern setting and additional screens are not displayed. $A \to A_N \to DA \to DA_N \to V \to W \to var$ $HV \leftarrow HI_N \leftarrow HI \leftarrow Hz \leftarrow PF \leftarrow VA$		A_N: N-phase current DA: Current demand DA_N: N-phase current demand HI: Harmonic current HI_N: N-phase harmonic current HV: Harmonic voltage
Press (PHASE)	3-phase 4-wire: A and DA switch as Average→1 Phase→2 Phase→3 Phase V switches as $V_{AVG}(L-N) \to V_{1N} \to V_{2N} \to V_{3N} \to V_{AVG}(L-L) \to V_{12} \to V_{23} \to V_{31}$ W, var, VA, PF switch as Total→1 Phase→2 Phase→3 Phase A_N, DA_N and Hz do not have phase switching. 3-phase 3-wire, 1-phase 3-wire: Phase for A, DA and V switch. 1-phase 2-wire: No phase switch.		
Press (+) or (−)	The harmonic degree switch. (Only for harmonics display)		
Press (DISPLAY) for 2 seconds	Switches to measurement item cyclic display.		
Press (PHASE) for 2 seconds	Switches to phase cyclic display.		

● **Clear the maximum/minimum value**

On the maximum/minimum value display screen, press the (RESET) for 2 seconds to clear the maximum/minimum value for the displayed measurement item to the present value.

On the maximum/minimum value display screen, press the (+) and (RESET) together for 2 seconds to clear all maximum/minimum values to the present value.

When the password protection setting is enabled, maximum/minimum values are cleared after you enter the password.

Also, you can clear all maximum/minimum values by communication function. (In this case, the password is not necessary.)

5.1. Basic Operation

● **Active Energy / Reactive Energy / Apparent Energy Display**

■ Display format

The following table shows the display format of active energy / reactive energy / apparent energy based on the total load.

$$\text{Total load power[kW]} = \frac{\alpha \times (\text{VT primary voltage}) \times (\text{CT primary current})}{1000}$$

α :	1	1-phase 2-wire
	2	1-phase 3-wire
	√3	3-phase 3-wire
	3	3-phase 4-wire

※1. For the direct voltage setting, the direct voltage is used for calculation instead of the VT primary voltage.

※2. For 3-phase 4-wire or 1-phase 3-wire, the VT primary voltage and direct voltage are calculated using the line to phase voltage.

Total load [kW]	Display type	
	Digital Display	Unit
Less than 10		kWh (Unit can be changed from Wh/kWh/MWh.)
10 or higher and less than 100		
100 or higher and less than 1000	888888	
1000 or higher and less than 10000		MWh (Unit can be changed from Wh/kWh/MWh.)
10000 or higher and less than 100000		
100000 or higher		

* For reactive energy or apparent energy, read Wh as varh or VAh.
The metering status blinks while the active energy is being counted.
When active energy is not counted, turns OFF.

Active energy measurement value

Metering status

■ Example Display

Active energy (Imported)

Active energy (Exported) *1

Apparent energy
Expanded counting setting of menu 3 is necessary in order to appear the screen of *1.

Reactive energy (Imported LAG)

Reactive energy (Imported LEAD) *1

Reactive energy (Exported LAG) *1

Reactive energy (Exported LEAD) *1

● **How to change the unit of Wh, varh and VAh**

When ⊕ and ⊖ are pressed simultaneously for 2 seconds, the unit of Wh, varh and VAh will be changed. This will enable to check the upper digits or lower digits of counts.

Example of change: Case of active energy (imported) = 012,345,678,901,234.567Wh

Press ⊕ and ⊖ simultaneously for 2 seconds

Unit：Mega

Unit：non (Lower digit enlarged)

Unit：non

Unit：kilo
Note1: All of Wh, varh and VAh change to same unit even if these are not shown on the screen.

Note2: When the setting value of the VT primary voltage and the CT primary current are large, the lower digits less than a measurement range display "0".

● **Wh, varh and VAh zero reset**

When (SET) , (RESET) ,and (PHASE) are pressed simultaneously for 2 seconds, the measured values of Wh, varh and VAh will be reset.

When the password protection setting is enabled, Wh, varh and VAh are reset after you enter the password.

Also, you can clear all Wh, varh and VAh values by communication function. (In this case, the password is not necessary.)

Note 1: This is effective only in the instantaneous value display.
Note 2: All of Wh, varh and VAh will be reset even if these are not shown on the screen.
Note 3: The periodic active energy will not be reset. Another operation is necessary.

5.1. Basic Operation

● **Reactive energy counting method (2 quadrant counting / 4 quadrant counting)**

There are the following two types of quadrants for counting reactive energy.
Counting method	Description
4 quadrant counting	It is counting (Imported lag), (Exported lead),(Imported lead) and (Exported lag) respectively as division of one. In general, it is counted by this method. However, at the boundary of each division, there is a dead region. It is suitable for the counting of equipment with the private electric generator.
2 quadrant counting	(Imported lag) and (Exported lead) are counted as division of one. (Imported lead) and (Exported lag) are counted as division of one. The dead region is made only nearby var=0 (power factor = 1). Therefore, because the dead region is not made nearby power factor = 0. It is suitable for the counting of equipment without the private electric generator and the reactive power of the capacitor load at the power factor = 0, generally.

The counting method for reactive energy (varh) is switched by "Expanded counting" in the Setting Menu 3.

Also, if setting of "IEC mode" in the Setting Menu 8 is ON, the counting method becomes 2 quadrant counting regardless of "Expanded counting" in the Setting Menu 3.

If setting of "Expanded counting" is selected for 4 quadrant counting and setting of "IEC mode" is ON, the screens of "exported lag" and "exported lag" appear, but these are not counting.

(Refer to page 32 about "Expanded counting" in the Setting Menu 3. Refer to page 47 about "IEC mode" in the Setting Menu 8.)

● **Each measurement item display during power transmission**

The following table shows the symbol display (±) for each measurement value according to the power reception /power sending status.

(Refer to page 32 about "Expanded counting" in the Setting Menu 3. Refer to page 47 about "IEC mode" in the Setting Menu 8.)
Quadrant / Measured items		Imported Lag	Imported Lead	Exported Lag	Exported Lead
A,DA,N-A,N-DA,V,Hz,VA HI,N-HI,HV		Unsigned			
W		Unsigned		"−"sign	
var	Normal mode (For 2 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※
var	Normal mode (For 4 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※	"−"sign **LEAD** display※
var	IEC mode (For 2 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※
PF	Normal mode (For 2 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※
PF	Normal mode (For 4 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※	"−"sign **LEAD** display※
PF	IEC mode (For 2 quadrant counting)	Unsigned **LAG** display※	"−"sign **LEAD** display※	Unsigned **LAG** display※	"−"sign **LEAD** display※

※Turns on when displayed on the bar graph.

- **Demand time and demand value of current demand**

The demand time (t_0) is the time until the measurement display value (I_0) displays 95% of the input (I) when a certain constant input (I) is given. To display 100% of the input (I), about three times more than the time (t_0) is needed.
The demand value is the measurement display value with the above time characteristics, and it shows the overall average within the demand time.
The demand value changes over a relatively long time, so it is not affected by input changes within a short time.
Therefore, this is good for monitoring transformer overload.

5.2. Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

The following explains usage according to the purpose during operation.

● **Display and operation of the upper/lower limit alarm**

When the value exceeds the upper or lower limit setting value set in advance, the display flickers and alarm can be output. (For more information about how to set the upper/lower limit alarm, refer to page 34 and after.)

■ Alarm indicator
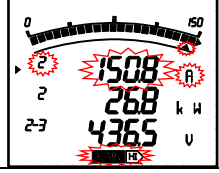

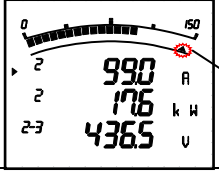

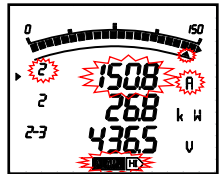

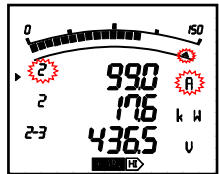

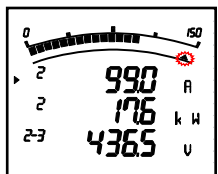

When the measurement element with an upper/lower limit alarm is displayed on the bar graph, "▲" flickers on the bar graph to indicate the upper/lower limit.

■ Behavior During Alarm Generation

Alarm condition: When measurement value exceeds alarm value, display flicker and an alarm contact closes.
Alarm cancel: When alarm is canceled, display flickers normally and alarm contact opens.
Note: When the alarm delay time is set, an alarm is generated only when the alarm value is continuously beyond the upper/lower limit alarm value for the delay time.

Alarm cancel method		Measurement value ≥ Upper limit value (or Measurement value ≤ Lower limit value)	Measurement value < Upper limit alarm value (or Measurement value > Lower limit alarm value)	
Automatic (Auto)	Display	ALARM, HI or LO flickers	Normal display	Upper/lower limit indicator
	Output (Alarm relay contact)	Closed	Opened	
Manual (HoLd)	Display	ALARM, HI or LO flickers (Alarm generation)	ALARM, HI or LO turns ON (Alarm retention) → RESET → Normal display (Alarm cancellation)	
	Output (Alarm relay contact)	Closed	Closed	Opened

Note 1: When the measurement element where the alarm generated exists on the display screen, the display for the digital value, unit (A, V, W, var, PF, Hz, %, DM, THD), and phase (1, 2, 3, N) will be based on the alarm status according to the following table. If it does not exist on the display screen, it does not flicker.

Alarm status	Digital value	Unit	Phase
Alarm generation	Flickering*	Flickering	Flickering*
Alarm retention	On	Flickering	Flickering*
Alarm cancellation	On	On	On

* Does not flicker when displaying phases where no alarm occurred.

Note 2: When the backlight flickering setting is set to ON (flicker) during alarm generation, the backlight also flickers when an alarm is generated.
Note 3: On the maximum/minimum value display screen, the present value (middle of the digital display) and ALARM, HI or LO blinks.

■ Monitoring phase for upper/lower limit alarm element

The phase that monitors the upper/lower limit alarm differs according to the measurement item. For more details, refer to the following table.

Upper/lower limit alarm element	Monitored phase			
	3-phase 4-wire	3-phase 3-wire (3CT,2CT)	1-phase 3-wire (1N2)	1-phase 3-wire (1N3)
Upper limit current, current demand	1, 2, 3	1, 2, 3	1, N, 2	1, N, 3
Lower limit current, current demand	1, 2, 3	1, 2, 3	1, 2	1, 3
Upper limit N-phase current, N-phase current demand	N	—	—	—
Lower limit N-phase current, N-phase current demand	N	—	—	—
Upper limit voltage (L-L) (Note 1)	12, 23, 31	12, 23, 31	1N, 2N, 12	1N, 3N, 13
Lower limit voltage (L-L) (Note 1)	12, 23, 31	12, 23, 31	1N, 2N, 12	1N, 3N, 13
Upper limit voltage (L-N)	1N, 2N, 3N	—	—	—
Lower limit voltage (L-N)	1N, 2N, 3N	—	—	—
Upper limit active power, reactive power, power factor	Total	Total	Total	Total
Lower limit active power, reactive power, power factor	Total	Total	Total	Total
Upper limit frequency	1N	12	1N	1N
Lower limit frequency	1N	12	1N	1N
Harmonic current total RMS value	1, 2, 3	1, 2, 3 (note 2)	1, 2	1, 3

Harmonic voltage total distortion ratio	1N, 2N, 3N	12, 23	1N, 2N	1N, 3N
Upper limit rolling demand	Total	Total	Total	Total

Note1: For phase 12 (or phase 31) at 1-phase 3-wire, alarm monitoring is executed using a value that is two times the set upper/lower limit alarm value.
Note2: Only 3-phase 3-wire (3CT) is measured for the phase 2 harmonic current.

5.2 Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)
● **Canceling the upper/lower limit alarm**

The alarm cancellation method differs depending on the setting for alarm reset. The upper and lower limit alarms can be cancelled also via communication.

| Alarm cancel method	Cancelation method
Automatic(Auto)	When the measurement value is below the upper/lower limit set value, the alarm is automatically reset.
Manual(HoLd)	The alarm is maintained even after the measurement value is below the upper/lower limit set value. After the measurement value is below the upper/lower limit alarm value, operate the following alarm cancellation operation. (Note: However, alarms cannot be cancelled from the maximum/minimum value display screen, or the digital input/output screen.) <Cancelling alarms for selected elements> Display the element where the alarm generated, and then press (RESET) to cancel the alarm. When an element has a phase such as current and voltage, it is necessary to press (RESET) for each phase when cancelling an alarm. <Cancelling alarms for all elements> At the current value display screen, press (RESET) for 2 seconds to cancel all alarms.

Note: The difference of 0.8% between the maximum scale and alarm value is used for determining whether the measurement value is below the upper/lower limit alarm value in order to prevent chattering.

● **Stopping backlight flickering caused by upper/lower limit alarm generation**

Press (RESET) the button to stop the backlight flickering.

● **Upper/lower limit alarm items on the alarm contacts**

Setting		Alarm item for alarm output	
Contact output function 1	Contact output function 2	C1A and C1B terminals	C2A and C2B terminals
Alarm output	Alarm output	Alarm item 1	Alarm items 2-4 (output collectively with either of them)
Alarm output	Pulse output	Alarm items 1-4 (output collectively with either of them)	No alarm
Pulse output	Alarm output	No alarm	Alarm items 1-4 (output collectively with either of them)
Pulse output	Pulse output	No alarm	No alarm

● **Display of periodic active energy**
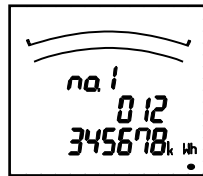

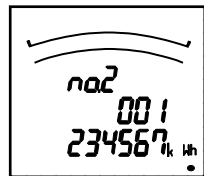

The ability to measure the active energy divided into two time segments enables individual measurement of the active energy in a desired time segment such as peak/off-peak and day/night.
The periodic active energy is counting, even if the periodic active energy display setting is OFF.

(For the setting of the Periodic active energy display, refer to page 44.)

The time segments can be switched according to the setting via communication or the digital input (DI).
(The time segments cannot be switched manually (button operation).)

<For control via communication> ・When the selected bit is ON (1), the active energy (Imported) is added to the periodic active energy n (where n = 1, 2). ・When the selected bit is OFF (0), the active energy (Imported) is not added to the periodic active energy n (where n = 1, 2).
<For control from the digital input (DI)> ・When there is no digital input (DI), the active energy (Imported) is added to the periodic active energy 1 and the active energy (Imported) is not added to the periodic active energy 2. ・When there is digital input (DI), the active energy (Imported) is not added to the periodic active energy 1 but the active energy (Imported) is added to the periodic active energy 2.
<For setting without switching> ・The active energy (Imported) is added to the periodic active energy 1 and periodic active energy 2. (No switching between time segments)

no.1
0 12
345678k Wh

no.2
00 1
234567k Wh

Periodic active energy 1   Periodic active energy 2

This is displayed when the (DISPLAY) button is pressed repeatedly in the operation mode to switch the measurement displays.

● **Resetting periodic active energy to zero**

Showing the periodic active energy 1 or 2 on the display and holding down the (RESET) button for 2 seconds reset the periodic active energy to zero. (Only the displayed periodic active energy is reset.)
When the password protection setting is enabled, the periodic active energy is reset to zero after the password is entered. The periodic active energy can be individually or simultaneously reset to zero via communication. (In this case, the password is not necessary)

5.2 Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

● **Display and calculation of rolling demand**

The rolling demand is the value obtained by dividing the active energy/reactive energy/apparent energy (*1) in a specified time (interval) by the length of the interval.
The block interval demand is to select the time width (interval) of the "block" used for the demand calculation.
(For setting of the rolling demand display, refer to page 44.)

①Rolling block
The rolling block is to select the interval and sub-interval from 1- to 60-minute intervals (by minutes) and calculate and update the rolling demand at the end of each subinterval.
＜Example when the interval is 15 minutes and the subinterval is 5 minutes＞

<Calculation of rolling demand>
The rolling demand is calculated when the "subinterval time" completes.

15 minutes

<Display of rolling demand>
The displayed rolling demand is the value of the latest interval time completed.

5 minutes

Time (minutes)

0   5   10   15   20   25

Note. Immediately after the adjusting rolling demand time is set, the demand time timer starts at "0 minute."

②Fixing block
The fixing block is to select the interval from 1- to 60-minute intervals (by minutes) and calculate and update the rolling demand at the end of each interval. (For the fixing block, the interval time and subinterval time should be the same.)
<Calculation of rolling demand>
The rolling demand is calculated when the "subinterval time" completes.

＜Example when the interval and subinterval are 15 minutes respectively＞

<Display of rolling demand>
The displayed rolling demand is the value of the latest interval time completed.

15 minutes   15 minutes

Time (minutes)

0   15   30

Note. Immediately after the adjusting rolling demand time is set, the demand time timer starts at "0 minute."

This is displayed when the (DISPLAY) button is pressed repeatedly in the operation mode to switch the measurement displays.

*1: The energy counting used the calculation of the rolling demand are as follows.

Item	Setting of IEC mode		Remarks
	Normal mode	IEC mode	
Rolling demand W (DW)	Active energy(import)	Active energy(import) - Active energy(export)	
Rolling demand var (Dvar)	{Reactive energy(Imported lag) + Reactive energy(Exported lead)}	{Reactive energy(Imported lag) + Reactive energy(Exported lead)} -{Reactive energy(Exported lag) + Reactive energy(Imported lead)}	Refer to the below picture.
Rolling demand VA (DVA)	Apparent energy		
−var

Exported lag   Imported lead

−W   +W

Exported lead   Imported lag

+var

73

5.2 Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

● **Adjusting rolling demand time**

Showing the rolling demand on the display and then holding down the ⊕ and ⊖ buttons at the same time for 2 seconds or more allows adjustment of the rolling demand time.
(Even if adjustment of the demand time is set to "Digital input," the demand time can be adjusted manually (by button operation).)
When the password protection setting is enabled, the demand time can be adjusted after the password is entered.
The rolling demand time can be adjusted also via communication although the setting item is not provided in the demand time adjustment setting. (In this case, the password is not necessary)

■ Select "whether to adjust or not" the demand time.

no ⟵⟶ yES
（Not adjust） （Adjust）

| Operation mode | Display for adjustment of the demand time | Operation mode |
● **Resetting the peak value of rolling demand**

Showing the rolling demand on the display and then holding down the ⊕ and (RESET) buttons at the same time for 2 seconds reset the peak value of rolling demand.
When the password protection setting is enabled, the peak value of rolling demand is reset after the password is entered.
The rolling demand can be reset also via communication. (In this case, the password is not necessary)

● **Display of operation time**

The measurement time is integrated according to the value set to the target for counting operation time (AUX, A, and V) and displayed as the load operation time.
To display the operation time, the operation time display setting should be configured in advance.
The operation time is counting, even if operation time display setting is OFF.
(For setting of the operation time display, refer to page 46.)

When the following set target for counting the operation time exceeds the threshold, the operation time 1 and operation time 2 are integrated.

Item	3-phase 4-wire	1-phase 2-wire	Others
AUX (Auxiliary power)	AUX	AUX	AUX
A (Current)	A_{AVG}	A	A_{AVG}
V (Voltage)	V_{AVG}(L-N)	V	V_{AVG}(L-L)

| Operation time 1 | Operation time 2 |

＜Using the operation time 1 and operation time 2 as appropriate＞
For example, if you want to check both of the operation time on a monthly basis (the value which is periodically reset) and the cumulative operation time from when the system started to operate (the value which is not periodically reset), use the operation time 1 and operation time 2 accordingly. If it is unnecessary to use the operation time 1 and operation time 2 at the same time, monitor either of them.

This is displayed when the (DISPLAY) button is pressed repeatedly in the operation mode to switch the measurement displays.

● **Resetting the operation time to zero**

Showing the operation time 1 or the operation time 2 on the display and then holding down the (RESET) button for 2 seconds resets the operation time to zero.
(Only the displayed operation time is reset to zero.)
When the password protection setting is enabled, the operation time is reset to zero after the password is entered.
All the operation times can be reset to zero also via communication. (In this case, the password is not necessary)

5.2 Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

● **Display and operation of digital input/output status**

The digital status can be displayed by inputting the switching signal of the breaker and the alarm signal of the over current relay to the digital input (DI) terminal.
The digital output (DO) terminal opens and closes the contact by communication control.
To display the digital input/output status, the digital input/output status display setting should be configured in advance.
(For setting of the digital input/output display, refer to page 45.)

■ Display examples
＜When the optional plug-in module "ME-0052-SS96" is installed＞
Digital input display（DI1 to DI5） Digital output display（DO1、DO2）
Digital input/ output status

: Digital opened
: Digital closed

These are displayed when the (DISPLAY) button is pressed repeatedly in the operation mode to switch the measurement displays.

■ Digital input reset method
The method for maintaining the digital input status differs according to the digital input reset method.

Reset method	Cancelation method
Auto reset (Auto)	If the digital input turns OFF (Open), the digital input status automatically turns OFF (Open).
Latch (HoLd)	After it is detected that the digital input is ON (Closed), the digital input status is kept ON (Closed) until executing latch cancelation, even when the digital point input turns OFF (Open). ⌠ When alarm contact such as ACB are input, alarm generation status continues on this measurement instrument even when an alarm generation stops so that an alarm cannot be missed. ⌡

■ Digital input conditions
The following are the digital input conditions.

Input conditions	Terminals DI
Rating	24VDC(19 to 30VDC),7mAor less
ON (Closed) / OFF (Open) time	30ms or longer for both ON and OFF

● **Releasing the digital input latch**

Holding down the (RESET) button for 2 seconds while the digital input display (DI) is displayed releases the digital input (DI) latches collectively.
The digital input latches can be released also via communication.

● **Preventing maximum value update by motor starting current**

When the motor current is monitored, use the motor starting current delay function to prevent maximum value update and alarm generation for the current, active power, reactive power, apparent Power ,and power factor due to the motor starting current. It is necessary to set in advance to use the motor starting current delay function. (About settings, refer to page 36.)

■ Movement when the motor starting current delay function is used

<Motor starting current detection>
When the current is over the motor starting current value, the motor current starting current delay time counter begins.

<Motor starting current delay>
The maximum values for the current, active power,reactive power and power factor are not updated during the motor,reactive power and power factor starting current delay time. Also, no alarm generated even if it is over the upper limit alarm value.

Note 1: Set the motor starting current value to a value lower than the lower limit value considering changes in the load current during operation.
Note 2: When the input current is below the motor starting current value, the minimum value update stops.

5.2 Usage According to Purpose (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

● **Password protection setting**

In the operation mode, after pressing (RESET) and (PHASE) simultaneously for 2 seconds or more, the password input display will be displayed. It is possible to set the password protection if you enter the password. Default password is "0000". If you enter the wrong password, to return to the password input display (the highest digit blink).
By pressing (DISPLAY) at the highest digit, to return to the operation mode.
If you enable password protection setting, you need to input password when performing the item of the following table.

■Password input

Password input display
```
PASS
0000
```

· Select a value of the blinking digit by pressing the (+) or (−) button from the highest digit.
· Pressing the (SET) button moves the setting digit (blinking digit) to a lower digit.
· Pressing the (DISPLAY) button moves the setting digit (blinking digit) to a higher digit.
· If you enter a correct password and pressing the (SET) in the lowest digit, password protection item is enabled.
· If you enter an incorrect password and pressing the (SET) in the lowest digit, to return to the highest digit.

■Password protection item

No.	Item
1	Shift to the setting mode
2	Clear the maximum/minimum value
3	Wh and varh, etc zero reset
4	Periodic Wh zero reset
5	Adjusting rolling demand time
6	Resetting the peak value of rolling demand
7	Clearing the operation time

■Password protection setting
(1)Set a password protection.

oFF ←——————→ on
（Not protected）　　（Protected）

```
PASS
oFF
```

(SET)

(2)Change the password.

no ←——————→ yES
（Not change）　（Change）

Note1. Select "no", and go back to the operation mode.

Note2. Select "yES", and the current password is displayed.

```
PASS
CHANGE
no
```

(SET)

(3)Input a new password.

· Select a value of the blinking digit by pressing the (+) or (−) button from the highest digit.
· Pressing the (SET) button moves the setting digit (blinking digit) to a lower digit.
· Pressing the (DISPLAY) button moves the setting digit (blinking digit) to a higher digit.
· Pressing the (SET) button at the lowest digit saves the password.
·Setting is available in range from 0000 to 9999

```
PASS
CHANGE
0000
```
Important	If You Forget Your Password：It is not possible to cancel the password in the field. Please contact your supplier.

6. Other

6.1. Display Pattern Contents

When the display pattern in the Setting menu 1 and the additional screen in the Setting menus 3, 7, and 8 are set, pressing DISPLAY changes the screens shown in the table below from the left to the right.

Note 1: When an additional screen is added, a screen number is added.

Note 2: When 1-phase 2-wire, only phase1 (A$_1$, DA$_1$) is displayed for current and only phase12 (V$_{12}$) is displayed for voltage. Other phases are not displayed even when they are set in the display pattern.

Note 3: The phases displayed in the display patterns of the above table are displayed on the screen according to the phase wire system setting shown in the table below.

Phase display in the table above	phase wire	1-phase 2-wire	1-phase 3-wire (1N2)	1-phase 3-wire (1N3)	3-phase 3-wire
Current	1	Phase not displayed	1	1	1
	2	Measurement not displayed	N	N	2
	3	Measurement not displayed	2	3	3
Voltage	12	Phase not displayed	1N	1N	12
	23	Measurement not displayed	2N	3N	23
	31	Measurement not displayed	12	13	31

Note 4: In the table, "Wh" indicates Imported active energy , and "varh" indicates Imported reactive energy (lag).

Note 5: When Wh or varh is selected at the screen of from No.1 to No.4, the additional display of Wh or varh appears. (P00)

6.2. Maximum Scale Value

Settable primary voltage, primary current, and standard maximum scale value are shown in the tables below.

●Maximum scale value of each item

Measurement element			Maximum scale value
Current, Current demand	Setting of current maximum scale ＝SP.		CT Primary current
Voltage	In the case with VT (Note 2)	1-phase 2-wire, 3-phase 3-wire	VT Primary voltage×150/110
		3-phase 4-wire	VT Primary voltage (Phase voltage)×150/110
			VT Primary voltage (Line voltage)×√3×150/110
	At direct input	1-phase 2-wire, 3-phase 3-wire — 110V	150V
		220V	300V
		440V	600V
		1-phase 3-wire (Phase voltage / Line voltage) — 110/220V	150V/300V
		220/440V	300V/600V
		3-phase 4-wire (Phase voltage / Line voltage) — 63.5/110V	100/150V
		100/173V, 110/190V	150/300V
		220/380V, 230/400V, 240/415V, 254/440V	300/600V
		277/480V	400/640V
Active power, Rolling demand W (Note 1)			VT ratio×CT ratio ×specific power(100%)kW
Reactive power, Rolling demand var (Note 1)			VT ratio×CT ratio ×specific power(100%)kvar
Apparent power, Rolling demand VA (Note 1)			VT ratio×CT ratio ×specific power(100%)kVA

Note1: At direct voltage setting, VT ratio = 1. The specific power is according to the table on the right.
Note2: For convenience of scale, this is rounded off to the nearest whole number.

●Specific power value for scale calculation

Phase line type	CT Secondary	Rated voltage		Specific power value (100%)
1-phase 2-wire	5A	At direct input (Line voltage)	110V	0.5kW
			220V	1.0kW
			440V	2.0kW
		In the case with VT (Line voltage)	100V, 110V	0.5kW
			220V	1.0kW
	1A	At direct input (Line voltage)	110V	0.1kW
			220V	0.2kW
			440V	0.4kW
		In the case with VT (Line voltage)	100V, 110V	0.1kW
			220V	0.2kW
1-phase 3-wire	5A	Without VT (Line voltage)	220V	1.0kW
			440V	2.0kW
	1A		220V	0.2kW
			440V	0.4kW
3-phase 3-wire	5A	At direct input (Line voltage)	110V	1.0kW
			220V	2.0kW
			440V	4.0kW
		In the case with VT (Line voltage)	100V, 110V	1.0kW
			220V	2.0kW
	1A	At direct input (Line voltage)	110V	0.2kW
			220V	0.4kW
			440V	0.8kW
		In the case with VT (Line voltage)	100V, 110V	0.2kW
			220V	0.4kW
3-phase 4-wire	5A	At direct input	63.5/110V	1.0kW
			100/173V 110/190V	2.0kW
			220/380V, 230/400V, 240/415V, 254/440V	4.0kW
			277/480V	5.0kW
		In the case with VT (Phase voltage)	63.5V	1.0kW
			100V, 110V, 115V, 120V	2.0kW
	1A	At direct input	63.5/110V	0.2kW
			100/173V 110/190V	0.4kW
			220/380V, 230/400V, 240/415V, 254/440V	0.8kW
			277/480V	1.0kW
		In the case with VT (Phase voltage)	63.5V	0.2kW
			100V, 110V, 115V, 120V	0.4kW

Note: For reactive power or apparent power, read kW of above as kvar or kVA.

6.3. Possible Setting Range for Maximum Scale

The maximum scale of current can be selected from about 40% to 120% of rating, and maximum scale of voltage can be selected from about 20% to 250% of rating, and maximum scale of active power and reactive power can be selected from about 20% to 120% of rating. But for the convenience of scale conditions, the values in the following tables are applied. Also, this is same as with corresponding measured values for maximum scale of analog output.

■Current maximum scale value

Possible setting range:-10 STEP to +3STEP of the rating
Example: When the rating is 100A, the value is from 45A to 160A.

Current maximum scale value (1/3)

Rolling Demand(Apparent power)		O	O	-	O	O	-	O	O	-	O	O	-	-	-	-	-	-	-
Operation time	1	O			O			O			O			-	-	-	-	-	O
	2	O			O			O			O			-	-	-	-	-	O

Note 1: RMS values of harmonics are total value and 1st to 31st (odd only). Distortion ratios of harmonics are total value and 3rd to 31st (odd only).

Note 2: "Imported" is what "Imported lag" and "Exported lead" are counted as a single division. "Exported" is what "Imported lead" and "Exported lag" are counted as a single division.

Note 3: The values which can be monitored by communication are same as the values displayed.

Note 4: When 1-phase 3-wire is selected, read the phase for the measurement item according to the following table.

Phase wire method	1 -phase	2 -phase	3 -phase	12 -phase	23 -phase	31 -phase
1-phase 3-wire (1N2)	1 -phase	N -phase	2 -phase	1N -phase	2N -phase	12-phase
1-phase 3-wire (1N3)	1 -phase	N -phase	3 -phase	1N -phase	3N -phase	13 -phase

6.5. Measurement Characteristic

■Metering actions in other than operation mode

Status	Measurement	Display	Analog output	Alarm contact point	Pulse output
Several seconds just after turning on the auxiliary power supply (Backlight is lit, and LCD is not lit.)	No measurement	No display	Output over about 100% may be made until internal voltage becomes stable.	Opened	No output
Setting mode, Set value confirmation mode Password protection mode	Same actions as in operation mode	No display of measured value	Same actions as in operation mode	Status before getting into setting mode and set value confirmation mode is kept.	Same actions as in operation mode
During power failure	No measurement	No display	No output	Opened	No output

■Metering actions in input status

Measurement items	Actions	
Current (A) Current demand (DA)	0A when the input current is less than 0.005A	When it is over the upper limit of the possible display range (9999), the upper limit of the possible display range (9999) is displayed.
Voltage (V)	0V when the input voltage (line voltage) is less than 11V. For 3-phase 4-wire, 0V when the line to neutral voltage is less than 11V or the line to line voltage is less than 19V. For 1-phase 3-wire, 0V when the voltage between P1-P3 is less than 22V.	When it is over the upper limit of the possible display range (9999), the upper limit of the possible display range (9999) is displayed. (Note 2)
Active power (W) Reactive power (var) Apparent power (VA)	0W, 0var and 0VA for total when the current and the voltage are 0A and 0V for all 3 phases. 0W, 0var and 0VA for each phase when the current of phase n is 0A or the voltage of phase n is 0V. (where n = 1,2 or 3)	When it is over the upper limit of the possible display range (9999), the upper limit of the possible display range (9999) is displayed.
Power factor (PF)	1.0 for total when the current and the voltage are 0A and 0V for all 3 phases. 1.0 for each phase when the current of phase n is 0A or the voltage of phase n is 0V. (where n = 1,2 or 3)	
Frequency (Hz)	When the input voltage of phase1 is low voltage, ---- will be displayed. Input 22V or more.	When the frequency is less than 44.5Hz or over 99.9Hz, ---- is displayed.
Harmonic current (HI)	For effective value measurement : When the current is 0A, 0A is displayed. (Each phase) : When the voltage of phase1 is 0V or the frequency is less than 44.5Hz, ---- is displayed for all phases.	For content factor measurement : When the 1st current harmonic is 0A, 0% is displayed. (Each phase) : When the voltage of phase1 is 0V or the frequency is less than 44.5Hz, ---- is displayed for all phases
Harmonic Voltage (HV)	For effective value measurement : When the current is 0V, 0V is displayed. (Each phase) : When the voltage of phase1 is 0V or the frequency is less than 44.5Hz, ---- is displayed for all phases.	For content factor measurement : When the voltage is 0V, 0% is displayed. (Each phase) : When the voltage of phase1 is 0V or the frequency is less than 44.5Hz, ---- is displayed for all phases
Operating Time	999999 hour is displayed if it is over 999999.	

Note1: Input current and input voltage means the input to the instrument. They are not to primary sides of VT, CT.

Note2: For direct measurement, it does not input upper maximum scale value.

■Analog output action

Output setting	Output range
Output limit setting is "ON"	-1% to 101% of span
Output limit setting is "OFF"	-5% to 105% of span
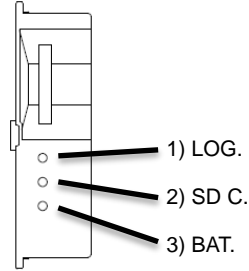

6.6. Troubleshooting

In the case of abnormal noise, odor, smoke, or heat generation from this instrument, turn it off at once.
Check the followings before you ask for repair.

	Condition	Possible cause	Solution
Display	The display is not lit.	Auxiliary power supply is not impressed on MA and MB terminals.	Impress auxiliary power supply.
	When the auxiliary power supply is impressed, display is not lit soon.	This is not an error. For about a few seconds after auxiliary power source is charged, initialization of internal circuit is carried out.	Use it as it is.
	The back light is not lit.	The back light may be set to auto off (Auto). (If it turns on after you press an operation button, it means the backlight is set to auto off.)	When the auto off is enabled, it automatically turns off in 5 minutes. Continue using it as it is or change the setting to HoLd (it stays on). (Refer to page 33)
	The display becomes black.	It may become black owing to static electricity.	It goes off after a while.
	"End" display remains.	The product is still in the setting mode.	Press $\boxed{\text{SET}}$.
Measurement error	The current and voltage have large errors.	The settings for VT / direct voltage and CT primary current may be incorrect.	Please check the set values for VT / direct voltage and CT primary current.
	The current and voltage are correct, but the active power, reactive power, and power factor have large errors.	The wiring for VT/CT or for the measurement instrument may be incorrect.	Please check the wiring for VT/CT and for the measurement instrument.
	Measured values of PF are including large error.	If the input current is smaller than the rating, error becomes large. (about 5% or below of rated current)	This is not an error, or uses it as it is, or if error is troublesome, changes the CT according to the actual current to be used.
	The displayed active power is different from the active power that is calculated by multiplying the displayed current, voltage, and power factor.	If the AC of the current and voltage deteriorate due to harmonics, it will not be the same as the calculated value. (For AC without harmonics, the calculated value will match with the displayed value.)	Please continue using the instrument as it is.
	The total effective harmonics value from the harmonic current is very different from the current value.	The distortion factor (content factor) is way over 100%. (Such as measurement of the inverter secondary side output)	Please check the measured item.
	The current measured by another measurement instrument (such as a clamp meter) is different from the current measured by this instrument. (More than the tolerance)	If another measurement instrument uses the average method for measuring, the measurement instrument used will have a larger error when the AC deteriorates due to harmonics. (This measurement instrument uses the RMS value method.)	Please compare the currents using a measurement instrument that uses the RMS value method.
	Analog output has a large error.	If the wiring to the receptor is long, the error may increase.	Perform the zero and span adjustment for analog output. (Refer to page 60.)
	Pulse output has a large error.	When the pulse unit is set to the minimum value and the pulse width is set to 0.500s or 1.000s, the pulse output cannot follow if the load is too large, which can result in a decrease in the pulse output number.	Review the pulse unit or pulse width setting (refer to pages 38).
	On the maximum/minimum value display screen, a present value that is outside of the maximum/minimum range is displayed.	During the starting current delay time, the maximum value is not updated, so the present value that is over the maximum value may be displayed.	Please continue using the instrument as it is.
Operation	Cannot change the settings in the setting mode.	If $\boxed{\text{SET}}$ at the bottom of the screen is blinking, you are in the set value confirmation mode. Settings cannot be changed in this mode.	Please go to the setting mode to change settings.
	"PASS 0000" appears when trying to change the setting mode.	The password protection setting is turned to valid.	Please enter the set password. Also, the default password is "0000" (Refer to page 76)
Other	Maximum value and minimum value changed.	These are cleared if the settings for the phase wire, VT/direct voltage, and CT primary current are changed.	Make a note of the values before changing the settings
	The values of the setting items that were not supposed to change have changed.	Some setting items return to the default values when settings for the phase wire method, VT/direct voltage, and CT primary current are changed.	Please refer to "Initializing Related Items by Changing Settings" (page 51) and reconfigure the setting items that returned to their default values.
	"PASS 0000" appears when trying to clear the energy or maximum/minimum value.	The password protection setting is turned to valid.	Please enter the set password. Also, the default password is "0000" (Refer to page 76)

	Condition	Possible cause	Solution
Communication or Logging	COM in the LCD screen is blinking. (Appears for 0.25sec. / Disappears for 0.25sec.)	MODBUS RTU® communication error as follows was detected. ・Communication setting(Slave address, baud rate, stop bit and parity) was incorrect. ・Function code was incorrect. ・Register address was incorrect. etc.	Review the communication setting, the function code and the register address and so on. If the correct query received, COM is lit.
	COM in the LCD screen is blinking. (Appears for 1sec. / Disappears for 1sec.)	When using ME-0000MT-SS96, MODBUS TCP® communication error as follows was detected. ・MODBUS TCP® application protocol header was incorrect. ・Function code was incorrect. ・Register address was incorrect. etc.	Review the MODBUS TCP® application protocol header, the function code and the register address and so on. If the correct query received, COM is lit.
		When using ME-0000BU-SS96, the error as follows was detected. ・Setting value set from the SD card was incorrect. ・SD memory card error. ・The battery is low voltage. etc.	Check the LEDs of ME-0000BU-SS96. 1) LOG. 2) SD C. 3) BAT. 1) LOG. LED is blink quickly. When Setting of Logging-item pattern is LP00, Setting data file needed to store in SD memory card was incorrect. Review the setting data file in SD memory card. 2) SD C. LED is blink quickly. Check whether the SD memory card is write-protect and SD memory card capacity is sufficient or not. 3) BAT. LED is lit. The voltage of the embedded lithium battery becomes low. It is impossible for customer to exchange the battery. Please consider renewal.

Installation 2. Mounting

1 Dimensions of mounting holes

The drilling dimensions of the panel are as shown in the right figure.
The product can be installed to a panel having a thickness of
1.6 to 4.0 mm.
2 Mounting position

The contrast of the LCD changes depending on the angle at which
it is viewed.
Mount the product in the easy viewable position.

Viewing angle

10°
60°
(side view)

60° 60°
(overhead view)
3 Mounting and fixing

Mount the product to the panel of the main unit according to the following procedure.

①Attach the mounting brackets to two areas
each in upper and lower parts of the main unit.
②Tighten the screws of the mounting
brackets to fix them to the panel.
Note	To avoid damage to the panel and screws, do not overtighten the screws. The recommended torque for this product is 0.3 N•m to 0.5 N•m (about half the normal torque). Tighten the upper and lower screws evenly.

Screw type for mounting to the main unit: M3

4 Mounting the optional plug-in module

Mount the optional plug-in module to the main unit according to the following procedure.

①Remove the optional cover.
②Mount the optional plug-in module to the main unit.
Engage the convex of the
optional plug-in module in
the groove of the main
unit.

Note	**Protecting sheet**
	The LCD part is covered with a protecting sheet to avoid scratches to the LCD during mounting of the panel. Before starting operation, remove the sheet. When removing the sheet, the LCD may illuminate due to static electricity, but this is not a product failure. After a while, the LCD goes off as it naturally discharges electricity.
	Mounting position
	To mount the product to the edge of the panel, check the space for wiring work before determining the mounting position.
	Optional plug-in module
	Turn off the auxiliary power before mounting the optional plug-in module. If the optional plug-in module is mounted during energization, the optional plug-in module cannot be recognized on the main unit side. In this case, turning on/restoring the auxiliary power or performing operation of "restarting the instrument" allows the optional plug-in module to be recognized.
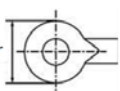

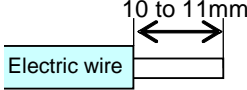

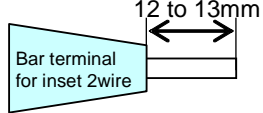

1 Applicable electric wire specifications

The following table shows applicable electric wire sizes.

Section	Screw type	Specification of wire used	Tightening torques
Terminal of main unit. (Auxiliary power, Voltage input, Current input, MODBUS®RTU communication terminal)	M3	・Use crimping terminals: AWG26 to 14 (Connectable 2 wires) Applicable crimping terminals: Outer Diameter ・ (diagram) For M3 screw with an outer diameter of less than 6.0mm.	0.6 to 0.8N·m
Terminal of Optional plug-in module ・ME-4210-SS96 ・ME-0040C-SS96 ・ME-0052-SS96	Without screw	Single wire, Stranded wire: AWG24 to 14 　Wire coating stripping length：10 to 11mm (Stranded wire is bar terminal can be used in combination.) 　Note: UL recognized corresponds, use according to the following conditions. 　　・Single wire, Stranded wire: AWG24 to 18 　　・Bar terminal can be not used in combination. Note: When using the bar terminal for insert 2 wire, please select insertion length of 12 to 13mm. 10 to 11mm　　　　12 to 13mm Electric wire　　　　Bar terminal for inset 2wire	-

2 Wiring of the main unit.

Be sure to securely tighten the terminal screws to the terminal block.

Terminal screw
⚠CAUTION	・ Please do not connect three or more electric wires to one terminal. This can cause heat and fire due to imperfect contact. ・ If you are using bare crimped terminals, provide the insulation needed to cover exposed live parts and prevent electric shock and short circuits (e.g., use insulated tubing).

3 Connection method of terminal of optional plug-in module.

①Peel the cover of the electric wire tip or crimp the bar terminal.

②With the lever pressed, insert the electric wire and then release the lever for connection.
4 Checking

Check the following after connection.

□The electric wire is securely connected.

□There is no error in connection.

Insert hole — — Lever

<table>
<tr><td rowspan="20">⚠CAUTION</td><td colspan="1">**Do not work with live wires**</td></tr>
<tr><td>Do not connect terminal and RJ-45 connector with live wires.

Do not insert and remove SD CRAD with live wires.
It may cause electric shock, burns, device burn out, or fire.
It is recommended that a protection fuse be used for VT and the auxiliary power source.</td></tr>
<tr><td>**Do not open the secondary side of the CT circuit**</td></tr>
<tr><td>Connect the CT secondary side signal correctly to the terminal for CT connection.
If the CT is not connected properly or if the secondary side of the CT is open, it may result in high voltage on the secondary side of the CT, the insulation of the secondary winding wire may be damaged, and burnout may be caused.</td></tr>
<tr><td>**Do not short the secondary side of the VT circuit**</td></tr>
<tr><td>Connect the VT secondary side signal correctly to the terminal for VT connection.
If the VT is not connected properly or if the secondary side of the VT shorts, over current may flow to the secondary side of the VT, which can burn out the secondary winding wire. If the secondary winding wire burns out, it can damage the insulation of the primary winding wire, resulting in a short between phases.</td></tr>
<tr><td>**Make sure connections to the connection terminals are tight**</td></tr>
<tr><td>Electrical wires must be properly tightened to the connection terminal.

Otherwise, heat and measurement errors may be caused.</td></tr>
<tr><td>**Do not forget wiring of "C_1","C_2" and "C_3" for pass.**</td></tr>
<tr><td>When the L side of CT circuit is common wire, it is necessary to short-circuit "C1","C2", and "C3" terminal of this device.</td></tr>
<tr><td>**Do not use improper electrical wires**</td></tr>
<tr><td>Make sure that the electrical wires have the proper rating for current and voltage.
If inappropriate electrical wires are used, fire may be caused.</td></tr>
<tr><td>**Do not pull the connection wires with force**</td></tr>
<tr><td>If the terminal wiring is pulled with a strong force, the input and output portion may detach.
(Tensile load: 39.2N or less)</td></tr>
<tr><td>**Do not apply an abnormal voltage.**</td></tr>
<tr><td>If a pressure test is given to a high-pressure device, a ground must be used in order to avoid damaging this measurement instrument. If a high voltage of AC2000V is applied for over one minute to the measurement instrument, damage may occur.</td></tr>
<tr><td>**Do not connect to Non-Connection (NC) terminal.**</td></tr>
<tr><td>Do not connect to Non-Connection (NC) terminals for the purpose of relay etc.</td></tr>
<tr><td>**Use the proper voltage for the auxiliary power source.**</td></tr>
<tr><td>Use the proper voltage for the auxiliary power source terminal.
If an improper voltage is used, the instrument may be damaged or fire may be caused.</td></tr>
</table>

Rating voltage for every phase wire system

Phase wire type	Type	Rating voltage	Figure
3-phase 4-wire type	STAR	max AC277V(L-N)/480V(L-L)	Figure 1
3-phase 3-wire type	DELTA	max AC220V(L-L)	Figure 2
	STAR	max AC440V(L-L)	Figure 3
1-phase 3-wire type	—	max AC220V(L-N)/440V(L-L)	Figure 4
1-phase 2-wire type (Note)	DELTA	max AC220V(L-L)	Figure 5
	STAR	max AC440V(L-L)	Figure 6

Note. In case of a circuit which is wired from the delta connection of a 3-phase 3-wire type or a circuit of a transformer of a 1-phase 2-wire type, the maximum rating is "AC220V".
In case of a circuit which is wired from a 3-phase 4-wire type, the star connection of a 3-phase 3-wire type or a 1-phase 3-wire type, the maximum rating is "AC440V".

Optional Plug-in Module: ME-4210-SS96
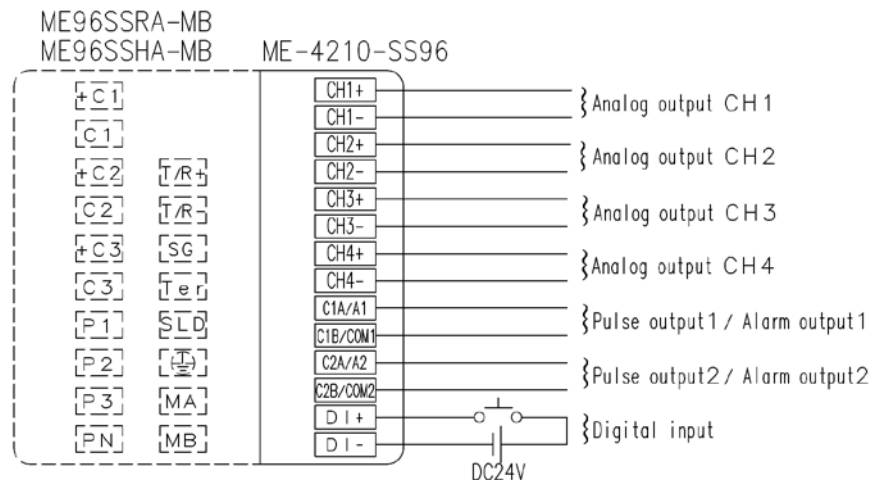

Optional Plug-in Module: ME-0040C-SS96
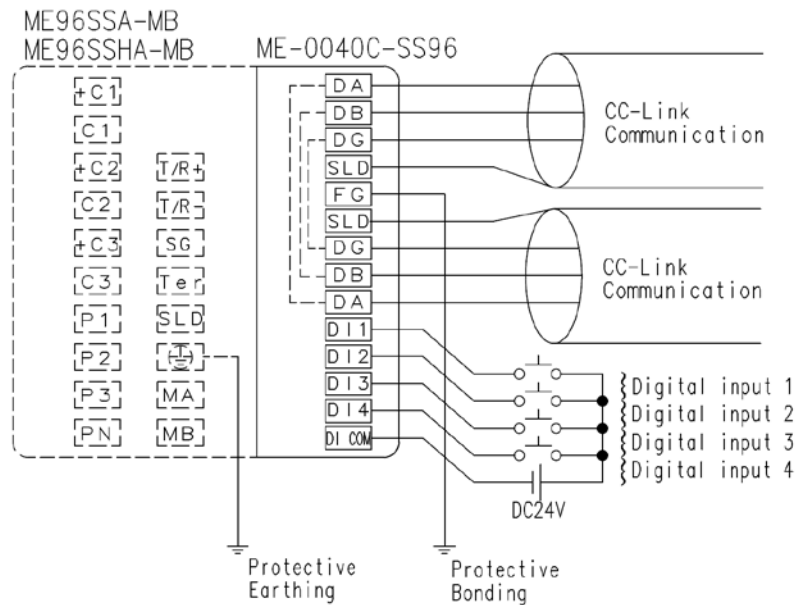

Optional Plug-in Module: ME-0052-SS96
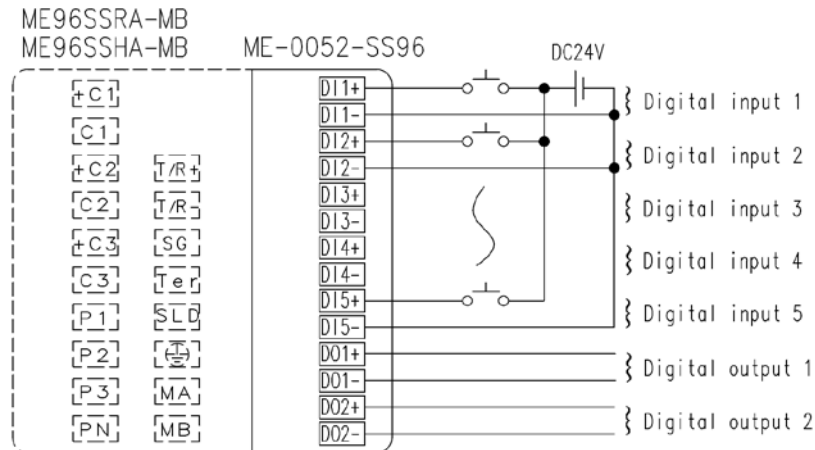

DI1-,DI2-,DI3-,DI4-,DI5-,
are connected inside.

Optional Plug-in Module: ME-0000MT-SS96

Optional Plug-in Module: ME-0000BU-SS96

Note for Input

Note	1. The voltage input terminals for 3-phase 3-wire are different from those for others. 2. If the polarity for VT and CT are wrong, the measurement cannot be executed correctly. 3. Do not connect wires to the NC terminals. 4. In the case of low voltage, there is no need for grounding of the secondary sides of VT and CT. 5. Always earth the ⏚terminal to the protective earth conductor. Earth the terminal with less than 100 ohm of earth resistance. Otherwise there will be a false operation.

Note for Output

Note	1. Do not bunch pulse outputs, alarm outputs and digital inputs/outputs signal cables with the main circuit or power cables, or install them close to each other. Keep the distance between the inputs/outputs signal cables and the main circuit or power cables and high voltage lines shown below, when they run parallel to each other. | Conditions	Distance
Below 600V and less than 600A power lines	30cm or more
Other power lines	60cm or more | 2. Analog outputs signal cables should keep the distance from the other power cables and input signal (VT, CT and auxiliary power) cables, and should not be bunched. And use the shielded cables or twisted pair cables so that it is not affected the noise, serge, and induction. Also, the wiring cables should be as short as possible. 3. MODBUS®RTU interface and analog outputs of ME-4210-SS96 do not have the insulation between them.
------	---

Note for MODBUS®RTU

Note	1. Use the shielded twisted pair cable. (Recommended cables: Refer to page 102.) 2. To the units at both ends of the MODBUS®RTU link, the 120-ohm resistance has to be attached. This instrument can perform a 120-ohm termination by short-circuiting the terminal of T/R- and Ter. 3. The earthing has to be connected to earth by a thick wire of low impedance. 4. Keep the distance between MODBUS®RTU link to power lines. 5. Connect to earth the SLD terminal at one end.

Note for CC-Link

Note	1. As for CC-link cable, use the designated cable. (Refer to page 102.) Ver.1.10-compatible CC-Link dedicated cables, CC-Link dedicated cables (Ver.1.00) and CC-Link dedicated high-performance cables cannot be used together. If used together, correct data transmission will not be guaranteed. Also attach the terminating resister which matches the kind of the cable. 2. Connect the shielded wire of the CC-Link dedicated cable to "SLD" of each module, and ground both ends of the shielded wire using grounding via "FG". The SLD and FG are connected within the module. 3. Because the CC-Link transmission line is a small signal circuit, it should be separated from any strong-current circuit by 10cm or more. However, if it is laid parallel for a long distance, it must be laid at least 30cm away. The terminal must be grounded before using. 4. The CC-Link transmission line should use an exclusive line that meets the requirements for total wiring length, distance between stations, and termination resistance values according to the communication speed. If you do not use an exclusive line or observe the wiring requirements, communication may fail. (Refer to the "CC-Link Cable Wiring Manual" about the exclusive line and wiring requirements.) 5. Connect the supplied "terminal resister" to each module at both ends of the CC-Link system. Connect the terminal resistors between "DA" and "DB". 6. CC-Link interface and MODBUS®RTU do not have the insulation between them.

Note for MODBUS®TCP

|	
Note	1. In 100Mbps communication by the 100BASE-TX connection, a communication error may occur under the influence of high frequency noise from devices other than this device in the installation environment. Take the following action to prevent the influence of high frequency noise in the construction of a network system. (1) Wiring connection ・Do not install a twisted pain cable together with the main circuit and power cables, etc. ・Place the twisted pair cable in a duct. (2) Communication system ・Increase the number of communication retries if necessary. ・Change the hub used for connection into a 10Mbps hub, and make communication at a transmission speed of 10Mbps.

Installation 5. How to insert and eject the SD memory card (ME-0000BU-SS96)

■How to insert the SD memory card

Slide the SD memory card straight into the slot until it clicks into place.
⚠CAUTION	・Make sure to use the SD memory card manufactured by Mitsubishi Electric Corporation (Model EMU4-SD2GB). Using the other types of the SD memory card may cause the trouble such as data destruction of the memory card or system failure. ・Insert the SD memory card with the write protect switch "OFF". If the write protect switch is "ON", the ME-0000BU-SS96 does not communicate with an SD memory card.

■How to eject the SD memory card
1) Check the SD C. LED turns off
2) Push the SD memory card in until it clicks into place.
3) The SD memory card comes out by itself.

1) Check the SD C. LED turns off

2) Push the SD memory card in.

3) The SD memory card coes out.
⚠CAUTION	During communication with the SD memory card, ejection of the memory card may cause data corruption of the memory card or failure of this unit or the memory card. Check that SD C.LED turns off to eject the SD memory card.

Specifications

1. Specification

Type	ME96SSHA-MB		
Phase wire system	3-PHASE 4-WIRE, 3-PHASE 3-WIRE(3CT, 2CT), 1-PHASE 3-WIRE, 1-PHASE 2-WIRE　(common)		
Rating	Current	AC5A, AC1A　(common)	
	Voltage	3-PHASE 4-WIRE：max AC277/480V 3-PHASE 3-WIRE：(DELTA)max AC220V, (STAR)max AC440V 1-PHASE 3-WIRE：max AC220/440V 1-PHASE 2-WIRE：(DELTA)max AC220V, (STAR)max AC440V	
	Frequency	50-60Hz　(common)	

Item	Measurement Item	Accuracy
Current (A)	A1, A2, A3, AN, A$_{AVG}$	±0.1%
Current Demand (DA)	DA1, DA2, DA3, DAN, DA$_{AVG}$	
Voltage (V)	V12, V23, V31, V$_{AVG}$(L-L), V1N, V2N, V3N, V$_{AVG}$(L-N)	
Active Power (W)	W1, W2, W3, ΣW	±0.2%
Reactive Power (var)	var1, var2, var3, Σvar	
Apparent Power (VA)	VA1, VA2, VA3, ΣVA	
Power Factor (PF)	PF1, PF2, PF3, ΣPF	
Frequency (Hz)	Hz	±0.1%
Active Energy (Wh)	Imported, Exported	class0.5S　(IEC62053-22)
Reactive Energy (varh)	Imported Lag, Imported Lead, Exported Lag, Exported Lead	class1S　(IEC62053-24)
Apparent Energy (VAh)	Imported + Exported	±2.0%
Harmonic current (HI)	Total, 1 to 31st(Only odd number)	±1.0%
Harmonic voltage (HV)	Total, 1 to 31st(Only odd number)	
Rolling Demand(DW)	Rolling Block, Fixing Block (Selectable by setting)	±0.2%
Rolling Demand(Dvar)	Rolling Block, Fixing Block (Selectable by setting)	±1.0%
Rolling Demand(DVA)	Rolling Block, Fixing Block (Selectable by setting)	
Periodic Active Energy (Wh)	Periodic Active Energy 1, Periodic Active Energy 2	class0.5S　(IEC62053-22)
Operation time (h)	Operation time 1, Operation time 2	(Reference)

Analog output response time	2 s or less　(HI and HV：10s or less)	
Measuring Method	Instantaneous Value	A・V：RMS calculation, W・var・VA・Wh・varh・VAh：Digital multiplication, PF：Power ratio calculation, Hz：Zero-cross, HI・HV：FFT
	Demand Value	DA：Thermal type calculation, DW：Rolling Demand calculation
Display	Type	LCD with backlight
	Maximum Number of Display Digits or Segment Number	Number of display digits	Upper stage display：6 digits, Middle stage display：6 digits, Lower stage display：6 digits A, DA, V, W, var, VA, PF, DW, Dvar, DVA：4 digits　　Hz：3 digits Wh, varh, VAh：9 digits(6 digits or 12 digits possible) Harmonic total distortion ratio：3 digits　　Harmonic RMS value：4 digits　Operation time：6 digits Digital input/output：I/O
		Bar graph	21 Segment-Bar graph, 22 Segment-Indicator
	Display updating time interval	0.5s, 1s	
Communication Specification	MODBUS®RTU communication	
Accessible option unit	ME-4210-SS96, ME-0040C-SS96, ME-0052-SS96, ME-0000MT-SS96, ME-0000BU-SS96	
Analog output	Output specification	DC4 to 20mA(0 to 600Ω)
Pulse/Alarm output	The kind of switch	No-voltage 'a' contact
	Contact Capacity	DC35V, 0.1A
	Pulse width	0.125s, 0.5s, 1.0s
Digital input(DI)	Contact Capacity	DC24V(DC19 to 30V), 7mA or less
	Signal width	30ms or longer
Digital output(DO)	The kind of switch	No-voltage 'a' contact
	Contact Capacity	DC35V, 0.2A
Power Failure Compensation	Non volatile memory(Items　：Setting value, MAX/MIN value, Active/Reactive/Apparent energy, 　　　　　　　　　　　　　　　Periodic Active Energy, Rolling Demand, Operation time)	
VA Consumption	VT	0.1VA/phase (at 110VAC), 0.2VA/phase(at 220VAC) , 0.4VA/phase(at 440VAC)
	CT	0.1VA/phase (at 5AAC)
	Auxiliary power	7VA(AC110V), 8VA(AC220V), 5W(DC100V)
Auxiliary power	AC100-240V(±15%), DC100-240V(-30% +15%)	
Weight	0.5kg	
Dimension	96(H)×96(W)×90(D)	
Attachment Method	Embedding attachment	
Operating temperature/humidity	-5 to +55℃(average temperature：35℃ or less per day), 0 to 85%RH, non condensing	
Storage temperature/ humidity	-25 to +75℃(average temperature：35℃ or less per day), 0 to 85%RH, non condensing	

Note1: Accuracy is specified according to the maximum scales value of rated value.
Note2: Measurement of harmonics which its distortion ratio is exceeded 100% may exceed the accuracy.
Note3: Harmonics cannot be measured without voltage input.

Specifications

2. Applicable Standards

Electromagnetic Compatibility		
Emissions		
	Radiated Emission	EN61326-1/CISPR 11, FCC Part15 Subpart B Class A
	Conducted Emission	EN61326-1/CISPR 11 FCC Part15 Subpart B Class A
	Harmonics Measurement	EN61000-3-2
	Flicker Meter Measurement	EN61000-3-3
Immunity		
	Electrostatic discharge Immunity	EN61326-1/EN61000-4-2
	Radio Frequency Electromagnetic field Immunity	EN61326-1/EN61000-4-3
	Electrical Fast Transient/Burst Immunity	EN61326-1/EN61000-4-4
	Surge Immunity	EN61326-1/EN61000-4-5
	Conducted Disturbances, Induced By Radio Frequency Fields Immunity	EN61326-1/EN61000-4-6
	Power Frequency Magnetic Field Immunity	EN61326-1/EN61000-4-8
	Voltage Dips and Short Interruptions	EN61326-1/EN61000-4-11

Safety		
	Europe	CE, as per EN61010-1
	U.S. and Canada	cRUus as per UL61010-1, IEC61010-1
	Installation Category	Ⅲ
	Measuring Category	Ⅲ
	Pollution Degree	2

3. Specifications of MODBUS® RTU Communication

Item	Specifications
Physical interface	RS－485 2wires half duplex
Protocol	RTU (Binary data)
Synchronization method	Start-stop synchronization
Network topology	Daisy-chain
Baud rate	2400, 4800, 9600, 19200, 38400bps
Data bit	8
Stop bit	1, 2
Parity	Odd, Even, None
Slave address	1 to 255 (0：For broadcast)
Distance	1200m
Maximum Number	31
Response time	1s or less (time to a response after receiving a query)
Terminate	120Ω　1/2W
Recommended cable	Shielded twisted pair, AWG24 to 14 gauge

■　About Programming
　　In addition to this manual, read the following documents too.
　　　● Electronic Multi-Measuring Instrument ME Series MODBUS® Interface specifications LSPM-0075

4. Specifications of CC-Link Communication

Item	Specifications
CC-Link station type	Remote device station (ver.1 remote device station or ver.2 remote device station)
Number of occupied stations	Ver.1 remote device station (ver.1 compatible slave station) setting: 1 station Ver.2 remote device station (ver.2 compatible slave station) setting: 1 station (Expanded cyclic setting: Octuple)
CC-Link version	CC-Link Ver 1.10 / 2.00
Transmission speed	Can select from 156kbps / 625kbps / 2.5Mbps / 5Mbps / 10Mbps
Maximum number of connected stations	If the system is configured by only this instrument, up to 42 units can be connected. (note1)

■　CC-Link Dedicated Cable
　　Use the CC-Link dedicated cables for the CC-Link system. If a cable other than the CC-Link dedicated cable is used, the performance of the CC-Link system cannot be guaranteed.
　　For the specifications of the CC-Link dedicated cables or any other inquiries, visit the following website:
　　CC-Link Partner Association:http://www.CC-link.org/

　　REMARK
　　For details, refer to the CC-Link cable wiring manual issued by CC-Link Partner Association.

■　About Programming
　　In addition to this manual, read the following documents too.
　　　● Electronic Multi-Measuring Instrument programming manual (CC-Link) LEN080334
　　　● Electronic Multi-Measuring Instrument programming manual (CC-Link)(For ver. 2 remote device station)......... LEN130391
　　Note1: As for details, refer to the above manuals.

5. Specifications of MODBUS® TCP Communication

Item		Specifications
Interface		1 port (10BASE-T/100BASE-TX)
Transmission method		Base band
Number of cascade connection stages *1		Max. 4 stages (10BASE-T), Max. 2 stages (100BASE-TX)
Maximum node-to-node distance		200m (656.16ft.)
Maximum segment length *2		100m (328.08ft.)
Connector applicable for external wiring		RJ45
Cable	10BASE-T	Cable compliant with the IEEE802.3 10BASE-T Standard (unshielded twisted pair cable (UTP cable), Category 3 or more)
	100BASE-TX	Cable compliant with the IEEE802.3 100BASE-TX Standard (shielded twisted pair cable (STP cable), Category 5 or more)
Protocol		MODBUS TCP (Port number 502)
Number of simultaneously connection		Max. 4 connection
Functions supported		Autonegotiation (10BASE-T/100BASE-TX automatically detected) Auto MDIX function (straight/crossover cable automatically detected)

*1. This is the maximum number of cascade connection stages when a repeater hub is used.
For the maximum number of cascade connection stages, contact to the manufacturer for the switching hub used.
*2. Length between a hub and a node.

■ About Programming
In addition to this manual, read the following documents too.
● Electronic Multi-Measuring Instrument ME Series MODBUS® Interface specifications LSPM-0075

6. Specifications of Logging

Item		Specifications
Logging mode		Auto overwriting updating
Type of logging data (*1)	Detailed data	Memorize measured data in the specified "Detailed data logging cycle" (1 minute, 5 minutes, 10 minutes, 15 minutes or 30 minutes). Data is output as detailed data file.
	One-hour data	Memorize measured data in one-hour cycle. Data is output as One-hour data file and One-day data file
The number of logging items	Detailed data	Up to 6 items
	One-hour data	Up to 6 items
Internal memory logging period	Detailed data	<table><tr><td>Logging cycle</td><td>Logging period</td></tr><tr><td>1minute</td><td>2 days</td></tr><tr><td>5minute</td><td>10 days</td></tr><tr><td>10minute</td><td>20 days</td></tr><tr><td>15minute</td><td>30 days</td></tr><tr><td>30minute</td><td>60 days</td></tr></table>
	One-hour data	400 days (About 13 months)
Logging period with SD memory card (2GB) *2		10 years or longer
System log data		1200 records
Output format of logging data and system log data		CSV format (ASCII)
Compensation for power failure		Lithium battery (Embedded in ME-0000BU-SS96) Total time of compensation is 5 year (average daily temperature is less than +35°C). (Lifetime expectancy of lithium battery is 10 year) (average daily temperature is less than +35°C). It is impossible for customer to exchange the battery. Please consider renewal.
	Setting values (Logging ID, Logging items, Detailed data logging cycle)	Memorized in FRAM (nonvolatile memory) The data is memorized during power failure.
	Logging data, System log data	Memorized in SRAM (volatile memory) Data is erased if power failure occurs under low battery voltage condition (BAT.LED turns on).
	Clock time operation	Clock time operation is stopped if power failure occurs under low battery voltage condition (BAT.LED turns on). After power recovery, timing is started from Jan 1, 2016 00:00:00.
Clock accuracy		Within ±1 minute per month (at 25°C)
Memory media for data output *3		SD memory card (SD, SDHC)
Optional part		SD memory card (EMU4-SD2GB) *3 *4

*1. Energy data (Wh,varh,VAh) is measuring data in ME96SS. These are not difference value calculated by logging cycle.
*2. It is the period until capacity of 2GB SD memory card is filled in always-on connection. Data amount depends on the number of characters. It is the logging period when data is output in maximum volume.
*3. Make sure to use the SD memory card manufactured by Mitsubishi Electric Corporation (Model EMU4-SD2GB). Using the other types of SD memory card may cause the trouble such as data destruction of the memory card or system failure.
*4. For purchase of optional parts, contact the shop you bought this product.

In addition to this manual, read the following documents too.
● ME-0000BU-SS96:Logging specifications LSPM-0092

		8.1.2	Operating time threshold	—	
	8.2		Switch element information	123	
	8.3		Set IEC mode	oFF(Normal mode)	

## 1. Calculation methods of ME96SS (for 3 phase unbalanced system with neutral)

Item	Normal mode	IEC mode	Remark
R.m.s current for phase p	$$I_p = \sqrt{\dfrac{\sum\limits_{k=0}^{N-1} i_{p_k}^2}{N}}$$		
R.m.s neutral current	$$I_N = \sqrt{\dfrac{\sum\limits_{k=0}^{N-1}\left(i_{1_k}+i_{2_k}+i_{3_k}\right)^2}{N}}$$		
Lp-N r.m.s voltage	$$V_{pN} = \sqrt{\dfrac{\sum\limits_{k=0}^{N-1} v_{pN_k}^2}{N}}$$		
Lp-Lg r.m.s voltage	$$V_{pg} = \sqrt{\dfrac{\sum\limits_{k=0}^{N-1}\left(v_{gN_k}-v_{pN_k}\right)^2}{N}}$$		
Active power for phase p	$$P_p = \dfrac{1}{N}\cdot\sum\limits_{k=0}^{N-1}\left(v_{pN_k}\times i_{p_k}\right)$$		
Apparent power for phase p	$S_p = V_{pN}\times I_p$		
Reactive power for phase p	$$Q_p = \dfrac{1}{N}\cdot\sum\limits_{k=0}^{N-1}\left(v_{pN_k}\times i_{90\_p_k}\right)$$ where i_{90_pk} is the current waveform shifted by 90°.	$$Q_p = \sqrt{S_p^2 - P_p^2}$$	Refer to page 69 for the sign.
Power factor for phase p	$$PF_p = \dfrac{P_p}{\sqrt{P_p^2 + Q_p^2}}$$	$$PF_p = \dfrac{P_p}{S_p}$$	Refer to page 69 for the sign.
Total active power	$P = P_1 + P_2 + P_3$		
Total reactive power	$Q = Q_1 + Q_2 + Q_3$		Refer to page 69 for the sign.
Total apparent power	$S = S_1 + S_2 + S_3$	$S = \sqrt{P^2 + Q^2}$	
Total power factor	$$PF = \dfrac{P}{\sqrt{P^2 + Q^2}}$$	$$PF = \dfrac{P}{S}$$	Refer to page 69 for the sign.
